

PRWeb: Technology Hardware / Peripherals

PRWeb® has offered free online press release distribution services since August 1997. Since then PRWeb® has gradually made the transition to a fully integrated press release newswire service. We are the largest Newswire catering to small and medium sized companies and organizations and one of the largest online press release newswires.

Our editors review thousands of press releases each week for distribution through the PRWeb® Newswire services.

As innovators and the acknowledged leader in online press release distribution since 1997, PRWeb has provided a simple, easy to use platform to ensure you get your message to the media and the masses. PRWeb has changed the way businesses, marketing departments and public relations firms think about press releases. Once a tool used exclusively for communicating with the media, PRWeb was the first company to develop a distribution strategy around direct-to-consumer communication.

A partial list of industry innovations include:

- * First free online press release distribution engine*
- * First in search engine optimized (SEO) press release formatting*
- * First in direct-to-consumer distribution of press release content*
- * Fully-integrated press content (press release and attachments) in a search-engine friendly format*
- * First free, search-engine optimized photowire*
- * First to provide RSS-enabled press releases for easy syndication*
- * Only press release distribution engine to provide TrackBacks for social commentary from blogs & websites*
- * First with news and search engine friendly embedded links*
- * Strategic partnerships with online partners who position your press release content at the forefront of the markets you aim to penetrate*
- * Exclusive "Fair Commerce" contribution system provides worldwide distribution of your PR for a fraction of the traditional costs*
- * Developed from the ground up as the most search engine optimized press release and content distribution platform in the world*

Take PRWeb® for a Test-Drive Today.

All press release newswires talk a good game - but we'd like to prove to you how effective PRWeb® will be to your online visibility goals. Whether you're a Fortune 500 firm or a single person startup, PRWeb will provide you the platform, tools, instruction and personal support to start, build and manage your PR Campaign. Please email or give us a call and one of our friendly editors will help you get started. Whether you want to dominate your market or just make a little noise, PRWeb is here to help you thrive in the marketplace, and with the media. If you are a public relations firm new to PRWeb, we have a special program for you. Please call Joe Beaulaurier (360-312-0892 ext. 3617) to learn if you qualify for a risk-free introduction to the PRWeb platform.

Eurotech Announces Two New Panel PC and Box Computer Models

Eurotech announces the new Panel Computer Vx-120F-N270 and Vx-150F-N270, based on the Intel® Atom™ N270 series, and the new Bx-400F-N270, an extremely rugged and compact box computer.

Amaro Italy (PRWEB) July 4, 2009 -- Eurotech announces today the new Panel Computer Vx-120F-N270 and Vx-150F-N270, based on the Intel® Atom™ N270 series. The efficiency, high performance and low power consumption of the 1.6GHz Ultra Low Voltage processor are embedded in a highly integrated design making them totally compatible with Intel® Core™ platforms. These two new models join Eurotechs comprehensive range of Vx Panel PCs.

The fanless, high performance Panel PC has been developed using no moving parts and a high quality mechanical engineering. The new Vx-120F-N270 12" and Vx-150F-N270 15" models are equipped with a high brightness TFT display that allows the installation in several applications, such as process control, HMI, building automation and other demanding applications.

The 8 wire resistive touch screen can guarantees a high calibration stability and a long term accuracy. The front panel has an IP65 protection, a USB port and is equipped with power on and HD LEDs. A monitor, mouse and keyboard can be connected externally, allowing fast set-up operations. Both Panel PCs come with 2-Gbit Ports as well as one expansion slot for add-On boards.

In addition Eurotech announces the new Bx-400F-N270, an extremely rugged and compact box computer. It has been designed for fanless applications and is based on N270 1.6GHz Ultra Low Voltage Atom™ processor from Intel®; its new, state of the art architecture is taking over embedded systems.

The new Box Computer Bx-400F-N270 has been designed to resist mechanical and temperature stresses, commonly found in industrial applications. Thanks to 4 USB interfaces, 2 ethernet ports and 2 serial ports, the Bx-400F-N270 can be easily connected to the most common interfaces available on the market.

Using the two mounting kits, the Bx-400F-N270 can be installed on DIN rail alternatively, it can be wall mounted with an optional mechanical kit.

For embedded applications the Bx-400F-N270 can be equipped with a Compact Flash reader and a pre-installed Windows XP or XP embedded operating system.

Availability: Mid September 2009

NCH Software Simplifies Interactive Voice Response

New Web Console Offers Easy Management and Remote Access of Voice Services

Denver, Colorado (Vocus) July 2, 2009 -- NCH Software, the leading provider of audio, video, business, and telephony/VoIP tools and utilities worldwide, today announced the latest release of its [IVM](#), interactive telephone system.

Nearly all of the setup and management features have moved to the new web based console and it now includes an intuitive setup wizard as well as an updated, comprehensive, help file. Administrators will now find all the former settings and options available under simple to navigate tabs providing a more user friendly interface when setting up a complex IVR program, a voice mail system or call attendant.

"NCH continues to focus on our end users and making sure IVM worked in a way that was not only convenient for them, but easy-to-understand," said Jennifer Saksa, marketing manager of NCH Software. "Businesses use IVM in all different ways, so providing an interactive voice response system, which is usually complex, in a format that could be easily followed was key."

IVM is one of the central products in NCH's telephony suite of software, which offers a variety of applications that can build on one another to create a customized phone system. Main features of IVM include: voicemail for an unlimited number of people, an auto attendant to direct incoming callers, and making automated outbound calls.

The addition of the web console provides access anywhere in the world, as long as there is an internet connection. It allows the user to check their voicemail, view logs, and restart the IVR server, all from a remote location.

Pricing and Availability

IVM is available for download at nchsoftware.com. IVM is available for a 14-day free trial period before purchase. There are five different licensing classes for IVM with prices starting at \$76.

About NCH Software

NCH Software offers more than 80 easy-to-use audio, video, business, and telephony/VoIP software solutions that improve productivity and usability for small businesses and consumers. Focused on specific needs, they produce software with all the bells and whistles of typical brands, but without the complexity. NCH Software provides users with what they need at a price they can afford. This approach generates more than four million unique visitors and nearly three million downloads per month from the company's website - nchsoftware.com.

Evil Youth Makes Impression at E3

More than 41,000 people attended the 2009 E3 Expo. Adam Coe of Evil Controllers recently had the honor of being one of the youngest CEO's ever participating at E3, the premiere video gaming convention. This wasn't the only buzz generated around the "Evil Booth" at the convention though.

Los Angeles, CA (PRWEB) July 3, 2009 -- More than 41,000 people attended the 2009 E3 Expo. Adam Coe of Evil Controllers recently had the honor of being one of the youngest CEO's ever participating at E3, the premiere video gaming convention. This wasn't the only buzz generated around the "Evil Booth" at the convention though.

From Justin Wong to Prodigy (from the WCG Ultimate Gamer) to tri force (who holds the current Tetris world record), a lot of big names in the gaming world were at or around the Evil Controllers booth at the convention. Wong spent a lot of time competing against any and all, in a challenge that benefited Saint Mary's Food Bank Alliance (a local food bank.) While no one managed to beat Wong, he set a world record for consecutive Street Fighter IV wins.

Evil Controllers was on hand to help the needy and let people know about their wide range of custom and pre-modded "rapid fire" controllers for Gears of War and other video games. They're constantly at work to make sure their controllers have what it takes to give video game players of all levels an extra edge. Beyond the rapid fire triggers, Evil Controllers also pays attention to ergonomics and fitting controllers to different video game genres.

They didn't have a big "mission accomplished" banner behind their booth, but it would have been prudent. This family operated company from Arizona was able to generate a lot of buzz, even among all the other announcements and excitement at the annual gaming convention. From Justin Wong setting a world record to all the other people who were attracted to the booth by the unique, cutting edge video game controllers, a lot of people stopped by the "Evil Booth" to do a little good.

The 2010 E3 Expo will take place from June 15-17, 2010, at the Los Angeles Convention Center, and you can expect more good from Evil Controllers in the years to come.

About Evil Controllers:

Evil Controllers is a Tempe, Arizona-based company that specializes in custom modded Xbox 360 controllers designed to enhance game play for a variety of different game genres. Started in a dorm room at Arizona University, and has gradually grown over the years thanks to the hard work of two brothers behind the company.

Their company takes advantage of the fact that computers are programmable, coming up with video game controllers that have the power to turn single shot and semi-automatic weapons into full automatic simply by holding the button down. Through innovative design and ergonomic upgrades tailored for specific types of games, Evil provides gamers with custom controllers that best fit their needs.

Mobile Studios Launches CGenie™ Pro HD Character Generator; Value Priced CG Handles Multiple Independently Controlled Graphic Elements

Mobile Studios Launches CGenie™ Pro HD Character Generator.... Value priced CG displays multiple independently controlled graphic elements. Supports true10-bit HD or SD at 1080i, 720P, 525i and custom video resolutions. Available in three configurations: in a unique airline travel case with monitor and pull-out keyboard, as a fixed desktop, or 1RU compact ultra compact rack-mount.

Boca Raton, Fla. (PRWEB) July 1, 2009 -- Mobile Studios, Inc., has announced the latest addition to its line of ultra-portable PortaCast(TM) flypack systems with the release of the CGenie™ Pro HD [Character Generator](#) priced substantially less than competitive models from Chyron, Compix, PixelPower or Harris Corp. The portable CG integrates a processor, LCD monitor and pull-out keyboard in Mobile Studios' unique [PortaCast CG](#) airline travel case with wheels and telescoping handle for easy transport. CGenie Pro HD is also available as a [desktop character generator](#) and an unrivaled 1RU ultra compact [rack-mount character generator](#) configuration.

CGenie Pro HD delivers broadcast quality graphics, scrolling text, crawls, animations, lower thirds, score-boards, timers, over-the-shoulder inserts and on-the-fly titles with preformatted templates. The system provides independent control of multiple graphic elements.

"CGenie Pro HD answers a long felt industry need for a powerful [CG](#) for SD and HD production at a truly affordable price," said Rich Rubin, President of Mobile Studios, Inc.

CGenie Pro HD is the most cost effective turn-key CG solution available for broadcasters, colleges and universities, sports, houses of worship and corporate communications departments.

Equipped with a high performance quad-core processor, the system supports true10-bit HD or SD at 1080i, 720P, 525i and custom video resolutions. It is easily connected to any video switcher or can be used as a stand-alone down-stream keyer with full controls including a fader and automatic page sequencer.

The CGenie character generator includes a powerful Title Composer program for creating graphics, lower thirds, animations and "on the fly" titling with preformatted templates. Text is created using TrueType fonts that can be sized, kerned, rotated and italicized. One button allows access to 64 most used text styles and each page can use up to 25 typefaces. Additional TrueType fonts can be loaded directly from CD or multi-card reader. Media catalogues are included to provide easy access to graphics, animations, templates and crawl files.

CGenie Pro HD character generator systems are available for immediate delivery from your local reseller.

Full features and specifications are available on the [Mobile Studios](#) website.

About Mobile Studios:

Mobile Studios, Inc. is the exclusive manufacturer of PortaCast(TM) portable video production systems and CGenie(TM) character generators with sales and rentals to the broadcast, corporate, sports, education, house of worship and government markets.

Synology® to Release New DLNA Compliant Media Server for DSM 2.2

Synology® America Corp. today announced that its new Media Server in DSM 2.2 is Digital Living Network Alliance (DLNA) compliant.

Redmond, WA (Vocus) June 30, 2009 -- Synology® America Corp. today announced that its new Media Server in DSM 2.2 is Digital Living Network Alliance (DLNA) compliant. With DLNA compliancy, Synology's line of Disk Stations has met the stringent interoperability guidelines set by the Digital Living Network Alliance and will work with other DLNA compliant devices in the market.

“Our Disk Stations are now compliant with DLNA technology which ensures interoperability among various DLNA certified devices; including consumer electronics, personal computers and mobile devices,” says Douglas Self, product specialist at Synology America Corp. “We have been committed to providing a hassle-free experience in sharing and storing digital content and this was a natural progression for our products.” Adds Self.

Today, more than 5,000 devices are DLNA certified and more than 245 well-known companies participate in using DLNA technologies. Using DLNA compatible devices makes enjoying digital content from any location whether it be work, home or on the road easy and accessible.

Availability

The new DLNA compliant Media Server will be included in the beta release of Disk Station Manager 2.2 set for July 2009. The official release of DSM 2.2 is scheduled for September 2009. DSM 2.2 will be available for all 09-series, 08-series and 07-series Disk Stations.

About Synology

Founded in April of 2000, Synology Inc. develops next-generation Network Attached Storage (NAS) products for the home, small and medium sized business markets. Providing a secure way of storing and sharing digital content, Synology products are feature-rich, easy-to-use, energy-efficient and affordable. All Synology product investments are enhanced with free software upgrades and 24/7 online support.

Headquartered in Taipei, Taiwan, Synology has a global presence with regional offices in the US (Redmond, Washington) and the UK (London, England).

Helios Interactive and Full Sail University Announce Partnership for the Helios GameCore 2.0 Product Launch Event

Helios Interactive and Full Sail University partner to present GameCore 2.0 at Digital Media Alliance Florida's June DiMeNar Event in Winter Park, Florida, with full support of the City of Orlando, City of Winter Park, Orange County and the State of Florida Governor's Office of Film and Entertainment.

Winter Park, FL (PRWEB) July 1, 2009 -- Helios Interactive (heliosX.com) will officially launch GameCore 2.0 (gamecore3d.com) - the newest release of their 3D game creation toolset and engine - in partnership with Full Sail University and Digital Media Alliance Florida (DMAF), the state's Digital Media Industry association, at the June 30th DMAF Digital Media Seminar (DiMeNar) hosted at Full Sail University's [Entertainment Business](#) building, the site of Full Sail University's Hall of Fame.

The Launch event will include speeches from Orlando Mayor Buddy Dyer and Winter Park Mayor Ken Bradley, as well as comments from Full Sail University President Garry Jones. The GameCore 2.0 product launch will be presented by Ravé Mehta, CEO of Helios Interactive and will showcase the latest features and capabilities that allow individual artists, independent developers and full blown studios to rapidly create and iterate concepts as well as produce full-fledged Games and 3D Interactive Content without the traditional barriers of complex technology, programming expertise and high development cost.

"GameCore 2.0 will revolutionize the 3D game and simulation industry worldwide by enabling a new generation of creatives and developers to easily create full games, virtual worlds, and other 3D interactive content." says Ravé Mehta. "There are already over 60 summer camps around the country using GameCore to teach 8-14 year olds how to build four full 3D games in one week - we're helping to create the digital workforce of tomorrow today!"

"We are thrilled to welcome Helios Interactive to the Full Sail campus and to celebrate the evolution of GameCore," says Garry Jones, President of Full Sail University. "We continuously strive to expose our 7,000 and growing student base to technology partners allowing them to create and innovate within the digital media and gaming industries, and we look forward to working with Helios on future synergies."

Ravé Mehta added, "Being located across the street from Full Sail University's world renowned [game design](#) and digital media programs, as well as their highly creative student base both on campus and online, Full Sail is the ideal University to help evolve GameCore and train the next wave of 3D interactive content developers."

The GameCore 2.0 product presentation will be followed by the DMAF DiMeNar panel discussion entitled "State-of-the-Digital-Media-Industry" featuring a panel of experts in the game development, social media, film, financing, and web sectors of the industry. "The quarterly DMAF DiMeNar events draw the who's-who of Florida's Digital Media industry, and provide some of the most insightful, relevant and educational panel discussions for our industry" said Jud French, Executive Director of DMAF. "Helios Interactive and GameCore

will open up an opportunity here in our state; planting the seeds to greatly expand our 3D digital workforce by enabling small teams to start new businesses and studios around the state with very little startup capital."

Winter Park Mayor Ken Bradley stated, "MEHTA acquired this gaming company and technology from Vancouver and relocated them to Winter Park and the Metro Orlando region. Mehta's choice in location shows that our region and city have the infrastructure through Full Sail and many other regional partners, to support our ever-growing digital media industry. They could have gone anywhere in the world and they have decided to call us their home....this is economic gardening at its best. GameCore 2.0 will have an impact on the career choices our future generation will make and it is all happening here in our own backyard!"

Orlando Mayor Buddy Dyer added, "Orlando hosts one of the top 12 clusters in the country for digital media and is the nation's epicenter for modeling, simulation and training industries with over 100 companies and \$2.5 billion in gross regional product. The cutting-edge work that Helios Interactive is doing will further contribute to making Orlando a world-wide Center of Excellence for 3D interactive games and simulations."

State of Florida's Film Commissioner Lucia Fishburne commends Helios and said, "This partnership between Helios and Full Sail represents more than just a product launch for Florida; it signals the start of our industry's movement towards training and creating a new type of digital workforce centered around 3D interactive content."

Guests for the event will include local and state politicians, city, county and state officials, game development and interactive media company executives, department heads of educational institutions, simulation and defense industry leaders, venture financiers, film industry veterans, as well as students, artists and independent game developers.

Other supporting partners for the event include City of Orlando, City of Winter Park, Orange County, State of Florida Governor's Office of Film and Entertainment, and Metro Orlando Economic Development Commission.

About Helios Interactive

Helios Interactive is a full service game development studio and 3D software technology company located in Orlando, Florida. Their flagship product - GameCore - is an easy to use 3D game creation toolset and engine that allows individual artists, independent game developers or full blown studios to create 3D games, virtual worlds and other interactive 3D content and applications. Helios Interactive is a MEHTA Group company. For more information, visit www.heliosx.com and www.gamecore3d.com.

About Full Sail University

Since 1979, Full Sail University, located outside of Orlando, FL, has been an innovative educational leader for those pursuing careers in the entertainment industry. With over 32,000 alumni, graduate credits include work on OSCAR®, Emmy® and GRAMMY®-winning projects, best-selling video games, and the #1 grossing U.S. concert tours. Full Sail's 190-acre campus and online education platform proudly welcomes over 7,000 students from 50 states and 65 countries.

Full Sail currently offers a total of 23 degree programs including: Associate of Science Degree in Graphic Design; Bachelor of Science Degrees offered in Computer Animation, Digital Arts & Design, Entertainment

360 Visibility Announces the Addition of Jens Baun as Vice President of Sales & Business Development

Jens Baun, successful and practiced Microsoft Dynamics NAV sales professional joins Toronto based solutions provider 360 Visibility as their Vice President of Sales and Business.

Toronto, ON (PRWEB) July 1, 2009 -- Solutions Provider 360 Visibility Inc. announces that [Jens Baun](#) from Copenhagen, DK will be joining the firm as their new Vice President of Sales & Business Development.

"Jens will provide leadership and coordination to our Sales, Marketing and Business Development departments, and allow us to further expand our business. His expertise will contribute greatly to the vision at 360, and his primary role will be to develop and implement sales and marketing strategies, and monitor and analyze sales and marketing activities against those goals. We're very excited to have such an energetic and passionate individual join our team. We believe he is exactly the right person to help us meet our long term growth plans, and we can't wait to make him part of 360's success" says Lynn Cooke, President and CEO of 360 Visibility.

With over 22 years in the Dynamics and ERP business, Jens brings with him a skill set and understanding that is second to none. Combined with his tenure, Jens is vehemently committed to constantly thinking outside the box when it comes to the product, solutions and client scenarios he encounters. As a seasoned business professional, Jens is committed to improving and growing his business through exceptional Sales tactics and a commitment to understanding his client's unique needs and challenges.

Jens has experience selling and implementing the entire suite of Microsoft Dynamics Products, with a specialty in [Microsoft Dynamics NAV](#), as well as solid understanding and experience with [Maconomy](#) - a Danish based product, sold by 360 Visibility.

Jens background includes being the Global Director of International Sales for Aston Naviteam/Aston group, where he established an international partnership model, and closed several large international deals. He has also co-founded and acted as CEO of several ERP focused businesses, as well as acted as the CEO of Shift IT A/S, which later merged with Capto A/S, where Jens became Sales Director and COO. Following his most recent position as a Sales Professional with Capto, Jens is ready for yet another adventure into the world of ERP Solution selling.

"The opportunity presented by 360 is very exciting to me. I look forward to learning a lot, while also adding my expertise to this growing business. I feel 360 is a great fit for my personality, and I am passionate about this new venture. I am confident that my approach to work and life will fit well with 360's expectations and approach, and I look forward to a long-term, mutually beneficial relationship with this company" says Jens.

Jens brings to Canada with him his wife Britta and their 2 children.

About 360 Visibility

360 Visibility is a Toronto-based business solutions company dedicated to enabling all enterprise participants to

make swift, well-informed, coordinated, and above all profitable business decisions. In short, they help companies see clearly, and act faster. They provide their clients with the [enterprise software](#), [communications systems](#), and [technology infrastructure](#) to allow them to effectively pilot their businesses, capitalizing on opportunities and avoiding pitfalls, to compete and win in today's challenging and dynamic business environment. 360's team of highly qualified and motivated IT and consulting professionals, have over 100 years' experience among them, in all aspects of systems analysis, design, implementation, training, and support.

Over the past 6 years, 360 Visibility has built an outstanding reputation in the fields of professional Services - including media and PR agencies, engineers and architects, financial services, hospitality - including hotels and resorts, and wineries, and the manufacturing and distribution sectors, and has remained an active and highly skilled reseller of Microsoft Dynamics Business solutions, Maconomy and Altigen VoIP telephony systems.

Remmon Releases New Remote Wireless Data Acquisition System

Web-based product especially designed for the energy, security and fluid transport industries

Beit She'an, Israel (PRWEB) July 1, 2009 -- [Remmon Remote Monitoring](#), a leading provider of wireless GSM remote control and telemetry solutions, today announced the release of the [R-Lite-Web](#), a new remote wireless data acquisition system. The new, cost-effective product is especially designed to meet the requirements of various control and management applications in the fields of security, energy and fluid transport such as water, fuel and sewage.

The R-Lite-Web is a GSM/GPRS remote data logger for the direct measurement and external reading of remote devices and sensors. Data is logged into the R-Lite-Web with a sample rate of minimum one minute and sent to a Web server via the cellular network (GPRS).

The R-Lite-Web is especially suitable for the following sectors:

- * Homeland security - burglary alerts
- * Fluid transfer - water, sewage purification and fuel
- * Control communication
- * Energy - automatic meter reading (AMR), alternative energy, generators and more
- * Climate and temperature control
- * Environment - weather stations, wind turbines

Remmon's CEO, Assaf Bassi, said, "Remmon continues with the accelerated development of new product lines in accordance with market demand. The R-Lite-Web addresses the growing need for strong and reliable systems that are, at the same time, also cheap and affordable. "The R-Lite-Web illustrates the flexibility and creativity of Remmon's engineers in developing cutting edge remote-controlled products."

The R-Lite-Web is a unit with analog and digital IO's that can be connected to Remmon web server. All the logged data at the unit is transferred to Remmon's web server, which is capable of accumulating and sampling data based on the client's specifications. Each client receives a personal username and password, allowing him to control an unlimited number of units under one custom-designed screen.

The data can be viewed on Remmon's secured site, which features advanced graphic technologies that allow each customer to design the graphs according to his own needs. In addition all the data can be download to data file (CSV). In addition, the R-Lite-Web provides 24/7 global communication coverage for automatic SMS alert messages, SMS I/O inquiries and SMS I/O settings. The versatile, reliable and quickly configured R-Lite-Web is a cost effective RTU (Remote Terminal Unit) Logger, featuring up to 2 A/I, 4 D/I, 2 D/O, 1 RS232/RS485 serial ports and automatic data dispatch service to the Internet.

About Remmon

Remmon Remote Monitoring is a leading provider of cost-effective [wireless GSM remote control](#), data log, m2m and telemetry solutions that maintain its customers' competitive edge.

Founded in 1999, Remmon takes advantage of the advances in the cellular data communication field to replace traditional landline or RF-based systems with cost-effective, intelligent, remote monitoring and control of hardware devices over the cellular backbone.

Remmon's proven experience is based on the successful completion of a large number of [telemetry projects](#) in governmental, municipal, large organization and industrial sectors. The innovative systems are installed in more than 22 countries around the world.

Remmon will be present at International Water Technologies & Environmental Control Exhibition - Watec Israel 2009, in Tel Aviv (November 17-19, 2009), at booth 108.

Creative Realities' CEO Jason Friedman Named Ernst & Young Entrepreneur Of The Year 2009 Award Winner in New Jersey

Award Recognizes Entrepreneurial Excellence in Business Services Category

Fairfield, NJ (PRWEB) July 1, 2009 -- Experiential branding and marketing company, Creative Realities, today announced that Jason Friedman, President and CEO, received the Ernst & Young Entrepreneur Of The Year® 2009 Award in the business services category in New Jersey. According to Ernst & Young LLP, the award recognizes outstanding entrepreneurs who are building and leading dynamic, growing businesses. Friedman was selected by an independent panel of judges, and the award was presented at a gala event at the Teaneck Marriott at Glenpointe on Tuesday, June 23, 2009.

"I am really honored to receive this award," Friedman said. "Since the company was founded in 1997, innovation has been the cornerstone of Creative Realities' expansion. We've believed in going above and beyond customer expectations to deliver a Wow experience. Now, more than ever, that philosophy is crucial to reaching people and to growing our business."

The Ernst & Young Entrepreneur Of The Year awards celebrate their 23rd anniversary this year. The program honors entrepreneurs who have demonstrated exceptionality in such areas as innovation, financial performance and personal commitment to their businesses and communities.

"We are proud to recognize the achievements of Jason Friedman," said Keith Brownlie, Ernst & Young LLP Entrepreneur Of The Year Program Director for New Jersey. "Winners of the Entrepreneur Of The Year award build leading businesses and contribute significantly to the strength of our region's economy. Their success helps our area grow stronger."

As a New Jersey award winner, Friedman is now eligible for consideration for the Ernst & Young LLP Entrepreneur Of The Year 2009 national program. Award winners in several national categories, as well as the overall national Ernst & Young Entrepreneur Of The Year award winner, will be announced at the annual awards gala in Palm Springs, California on November 14, 2009. The awards are the culminating event of the Ernst & Young Strategic Growth Forum, the nation's most prestigious gathering of high-growth, market-leading companies.

Sponsors

Founded and produced by Ernst & Young LLP, the Entrepreneur Of The Year awards are pleased to have the Ewing Marion Kauffman Foundation and SAP America as national sponsors.

In New Jersey, local sponsors include Gold sponsors Bowne & Co and Curran & Connors and Silver sponsors Gibbons P.C., NJBIZ and WithumSmith+Brown.

About Creative Realities

Creative Realities is an experiential branding and marketing firm that creates wow environments and customer experiences for organizations in the fields of retail, hospitality, entertainment, healthcare, education, and general

corporate. Its clients include Bank of America, Foot Locker, Harvard University, Hyatt, Radio Shack, Samsung, Stanford University, T-Mobile, TiVo, and Time Warner. In 2007 and 2008, Creative Realities was named to Inc. magazine's "Inc. 5000" list of America's fastest-growing, privately-held companies. For more information, visit cri.com.

About Ernst & Young's Entrepreneur Of The Year® Awards Program

Ernst & Young's Entrepreneur Of The Year® Award is the world's most prestigious business award for entrepreneurs. The award makes a difference through the way it encourages entrepreneurial activity among those with potential and recognizes the contribution of people who inspire others with their vision, leadership and achievement. As the first and only truly global award of its kind, the Ernst & Young Entrepreneur Of The Year® award celebrates those who are building and leading successful, growing and dynamic businesses, recognizing them through regional, national and global awards programs in more than 135 cities in 50 countries.

Leading European Service Provider SMiLOUS, Selects TelcoBridges for Performance, Reliability and Scalability

SMiLOUS Relies on TelcoBridges' Carrier Grade Tmedia Solution

Montreal, Canada (Vocus) July 1, 2009 -- [TelcoBridges](#)TM Inc., the preferred hardware and software supplier for telecom system integrators, solution developers and service providers, today announced that leading European service provider SMiLOUS has selected TelcoBridges' award winning family of hardware solutions to support its managed switching and global Meet-me-Room solutions.

With more than 10 years of experience, SMiLOUS is an expert in providing professionally managed switching services. Based in Frankfurt Germany, SMiLOUS provides its customers with global accessibility and local connectivity, through its presence in more than 40 locations worldwide.

SMiLOUS' Telco Village is a global Meet-me-Room and managed switching solution, which enables companies to communicate and collaborate, regardless of distance. The Telco Village solution is provided on a rented capacity basis. Unlike many telecom offerings, no capital equipment expenditures are required. Customers are guaranteed bandwidth, and network capacity is rented on an as-needed basis, without a long-term contract.

The Telco Village solution features three core switching centers in London, Frankfurt and Hong Kong. The network also features 40+ POPs at locations worldwide, and supports all industry standards and protocols. As a result, customers avoid negotiating contracts with collocation providers, or dealing with a network, and SMiLOUS handles all of the points of presence, network, switching, routing and billing.

SMiLOUS has integrated TelcoBridges' award-winning Tmedia and Media Gateway Application software, to transport thousands of concurrent calls via high-capacity optical circuits. The TelcoBridges products are connected via STM-1 interfaces to SMiLOUS' network, providing a fully redundant architecture. TelcoBridges was selected because it is one of the only media gateway products available on the market that supports a carrier-grade solution, and is completely scalable and field upgradeable to add capacity as needed.

"We've chosen TelcoBridges' hardware because of its high-density, high-availability, and because we believe that TelcoBridges offers the best overall value in the industry," said Christos Omiridis, Managing Director for SMiLOUS.

"Today, more and more businesses are using SMiLOUS's global Meet-me-Room services to boost productivity, reduce travel costs, and leverage the skills of remote workers, and innovations like the Telco Village are solutions launched at the right place, at the right time, to address this market opportunity," said Danny Paul Blouin, VP of Marketing for TelcoBridges.

About TelcoBridges:

[TelcoBridges](#) is clearly defining the future of communications technologies. By supplying the industry's best

telecom platform, TelcoBridges is helping telecom developers and integrators of VoIP and TDM solutions realize their bright ideas. TelcoBridges' customers develop and deploy carrier-grade telecom solutions for some of the world's largest operators in over 45 countries. These solutions include: mobile value-added services, location-based services, video calling applications, network monitoring, media gateways, switching, IVR, unified communications solutions, and more. For additional information, please visit www.telcobridges.com.

Jolly Q1 FY 2010 Revenue up 15 Percent

Jolly continues growth during reorganization.

San Carlos, Calif. (PRWEB) July 1, 2009 -- Today Jolly Technologies, the world's #1 identity software company, announced record sales for the quarter year ending May 31, 2009. Revenue for the quarter is up 15% over FY 09 and 84% over FY 08. Jolly maintained its growth pattern by securing yet another quarter of revenue growth and profitability.

Visitor Management Systems sales fueled the quarter's growth with very strong sales increases in the Lobby Track product line.

"It is significant that we grew 15% in this challenging business environment, however, it was below expectation," said Sandeep Jolly, President of Jolly Technologies. "During this quarter the company reorganized and overhauled operations so that company can sustain future growth. I feel the upper management resources required for these activities distracted from revenue generation. I strongly feel it was worth the investment and it further strengthens Jolly's foundation and makes Jolly much stronger, efficient and capable of handling future growth. Results of key measures are already showing up in Q2 FY 2010 and the company expects to announce significantly higher growth in Q2."

During the quarter, the company hired Lorna Papsdorf as Director of Operations to restructure financials and operations. She joins Jolly with a strong finance and operations background from Bear Stearns.

Jolly will announce a new product line and will also release new version updates to its existing line, with major new features, during July, 2009.

About Jolly Technologies

Jolly Technologies, founded in 2000, develops and distributes a suite of secure identification software products, including ID Flow, the world's #1 identification software, Lobby Track visitor/entry tracking software, access control software, and a variety of other custom security products. As the recognized leader in the rapidly growing secure identification market, Jolly Technologies is partnered with the industry's largest hardware manufacturers to offer complete solutions through our channel partners. Based in San Carlos, California, Jolly Technologies is one of the world's fastest growing software companies. For more information, visit www.jollytech.com or call toll-free 1-888-25-JOLLY.

Yoggie Launches New Breed of Secure USB Flash Drive

Yoggie Data Keeper™ boasts range of unique security features and delivers advanced user options.

Beth Halevy, Israel (PRWEB) June 30, 2009 -- Yoggie Security Systems™ today announced the launch of the Yoggie Data Keeper™ line of secure USB Flash Drives (UFD). With its host of unique and high end security features such as a built-in anti-virus scanner, online firmware updates and multiple password capability, the Yoggie Data Keeper protects users from a host of cyber threats when transferring data to and from a computer that may not be secure.

Until now, portable storage devices have often acted as a back door for virus and malware transfer, however, the Data Keeper Pro's built-in Anti-Virus software automatically scans files copied in/out of the Data Keeper Pro in real-time. Users are protected without having to instruct their host computer's security suite to scan files prior to transfer. In addition, the virus signature database is automatically updated without slowing the host laptop or PC and an on-demand scan feature allows users to scan and clean any drive or folder on the host computer.

As the first ever Secure USB Flash drive that provides more than one password, the Data Keeper Pro supports two distinct user passwords and file permission access control. Users can grant full or guest access to another user and thus protect any files they wish to keep private which in turn means there is much greater flexibility in who can use the device.

Shlomo Touboul, Founder and CEO of Yoggie Security Systems™ commented, "Most USB-based storage devices are focused solely on capacity despite the fact that just about anything related to transfer or storage of data is at risk. The Data Keeper takes UFDs to the next level by integrating security with the device in a way that protects users without the need for user action or technical know-how. In doing so, it closes the gaping hole in the portable data storage market without compromising the speed and convenience that users expect from a USB storage device."

With 2 or 4 GB of storage and 256-bit AES hardware based encryption, the Yoggie Data Keeper will be available in three models:

- *Yoggie Data Keeper™ - Yoggie's core Secure UFD, complete with a unique online firmware update capability.
- *Yoggie Data Keeper Pro™ - An advanced Secure UFD with additional built-in security features such as Anti-Virus, multiple passwords etc.
- *Yoggie Data Keeper Personal Ed.™ - Yoggie's hardware-based Secure UFD with a unique online firmware update capability as well as both secure and non-secure partitions. Designed and priced for consumers.

Anyone wishing to purchase a Yoggie Data Keeper™ can pre-order now via the Yoggie.com e-store for a special offer price. The product will begin shipping August 1st, 2009.

The Yoggie Data Keeper™ is the latest innovation from the company behind the popular Gatekeeper Pico™ and Gatekeeper Card™- a miniaturized computer in both USB dongle and ExpressCard form that plug into any laptop, PC or Mac and runs a suite of 13 security applications including several patented programs.

- END -

About Yoggie Security Systems™

Yoggie Security Systems (<http://www.yoggie.com>) established in 2005 by Shlomo Touboul - the inventor of Behavior Based Blocking Technology - is the developer of the world's first hardware-based personal security computer solution. Yoggie's range of USB key-sized and ExpressCard-sized security minicomputers connects to any PC or laptop at home, in the office and on the road - blocking Internet threats outside the host computer and boosting computer performance by off-loading installed security software. Yoggie's products combine best of breed security software with propriety patent pending developments to provide the most comprehensive all-in-one security technology available to both consumers and corporate users.

Yoggie has been recognized by numerous prestigious industry organizations for its unique and innovative security technology. The company continues to expand rapidly through its growing worldwide network of first class distributors, resellers and its own e-store and offers a comprehensive support service including telephone support and an online knowledge base.

Yoggie, Yoggie Security Systems, Yoggie Data Keeper, Yoggie Data Keeper Pro, Yoggie Pico, Firewall Pico, Gatekeeper Pico, Gatekeeper Pico Pro and Gatekeeper Card Pro are trademarks of Yoggie Security Systems. All other trade names are the property of their respective owners.

Mobile Printing Accessible to Retailers of All Sizes

Mobile printing technology offers retailers new ways to increase productivity and improve their labor costs during the fluctuating economy. Retailers can now calculate the return on investment (ROI) of a mobile printing solution at www.retailmobilesolutions.com.

Bellingham, WA (PRWEB) June 30, 2009 -- Mobile printing technology offers retailers new ways to increase productivity and improve their labor costs during the fluctuating economy. Retailers can now calculate the return on investment (ROI) of a mobile printing solution at www.retailmobilesolutions.com.

According to Ryzex Director of Marketing, Eric Lazo, "Retailers tell us they are looking for solutions that offer a fast ROI. Mobile technologies, such as portable printers, are critical to enabling a workforce to do more in a shorter period of time, while also facilitating proven retail sales techniques, such as line busting."

Wireless printers offer a sizable ROI due to their impact on worker productivity. These mobile solutions allow retailers to print receipts, labels and other documents from pocket sized devices. Store employees can scan inventory, change prices and apply product labels without ever leaving the aisle. As technology has rapidly improved, today's mobile printers have also become more affordable and accessible to retailers of all sizes. According to Daniel Hopping of Next Retail Group, "The cost of computing and the cost of wireless have dropped to the point that there's a business case for virtually every retailer."

Ryzex, a mobile technology company focusing on automated data collection (ADC) products and services, has partnered with printer manufacturer Zebra Technologies to offer [thermal mobile printing solutions](#) specially aimed at retailers. Ryzex has created a website for retailers to research the benefits of mobile printing, compare printers and calculate the return on investment (ROI). Retailers can learn more about mobile printing and utilize the ROI calculator at www.retailmobilesolutions.com.

About Ryzex

Ryzex is a full-service mobile technology company, focusing on automated data collection (ADC) solutions. With 20 years in business, more than 6,000 customers worldwide rely on Ryzex products and services, getting maximum lifetime return on their barcode, RFID and ADC systems. Products include new and refurbished devices, repair, buyback and rental programs, and installation and integration services. Ryzex sells equipment from all major data collection manufacturers and has 350 employees across North America and Europe.

www.ryzex.com

About Zebra Technologies

Zebra Technologies Corporation (Nasdaq: ZBRA) provides the broadest range of innovative technology solutions to identify, track, and manage the deployment of critical assets for improved business efficiency. Zebra's core technologies include reliable on-demand printer and state-of-the-art software and hardware solutions. By enabling improvements in sourcing, visibility, security and accuracy, Zebra helps its customers to put the right asset in the right place at the right time. Zebra serves more than 90 percent of Fortune 500 companies worldwide. For more information about Zebra's solutions visit www.zebra.com.

Green Gadget Lovers Can Save Some Serious 'Green' on Innergie mCube90 and mCube90DC Universal Adapters

Company Slashes Prices on Versatile Adapters by 20 Percent

Fremont, CA (PRWEB) June 30, 2009 -- Green gadget lovers can save energy -- and some serious "green" - thanks to an announcement by Innergie that it is slashing prices by 20 percent on its versatile, multi-port mCube90 and mCube90DC universal power adapters.

Effective today, the popular mCube90 will retail for \$99.99 and the mCube90DC-only travel adapter will sell for \$49.99. Innergie also reduced prices on its line of USB accessories. Innergie products are available online at www.myinnergie.com and on Amazon.com.

Innergie's mCube90 is actually two power adapters in a single stylish package - an AC adapter that plugs into the wall for home and office use and a detachable DC adapter -- the mCube90DC -- for charging consumer electronic devices while on an airplane, a train or in an automobile. Exclusive to the mCube90, this Auto/Air feature makes the product an especially convenient travel power adapter. The mCube90 is designed for those users who want power whenever and wherever they need it, while the mCube90DC is aimed at consumers who want an adapter when they are on the road.

"Consumers want products that are energy-efficient and that save them money," said PS Tang, Innergie co-founder and senior director of Sales and Marketing. "The mCube90 and mCube90DC deliver style, versatility and convenience at an unbeatable price."

The mCube90 recently received the prestigious iF Product Design Award and was honored at International CES® as an Innovator Design and Engineering Award honoree in the portable power products category. The product also earned "Gear of the Year" honors from PC World and was cited by PC Today for its energy-conscious technology.

The mCube90 and mCube90DC are able to charge most computers with a display size of no more than 17 inches and that operate in the range of 18-21 volts and 70W or less. Devices in this category include laptops, camcorders, digital cameras, portable game consoles, MP3 players, mobile phones, and more.

By design, the mCube90 reduces the amount of energy needed to build, package, ship and discard device-specific power adapters that are tossed when CE products are replaced, even though those power adapters are in perfect working order. Innergie lifestyle energy products were developed to appeal to consumers who care about the environment - and about doing their part to conserve energy and to eliminate the millions of obsolete power cords and chargers that end up in landfills every year.

About Innergie:

Innergie creates innovative lifestyle energy products for an ever-changing world. Established in 2008 by an experienced team of power industry engineers and product designers, Innergie maintains operations in the United States, India, Romania, Singapore, Taiwan, Thailand and The Netherlands. To learn more about Innergie and its

line of lifestyle energy products, visit www.myinnergie.com.

Note to editors: A limited number of evaluation units of the mCube90 and mCube90DC are available on request at admin (at) edgecommunicationsinc (dot) com.

IGEL's New Linux Universal Desktop Firmware Helps Customers Save Time, Money and Energy

• New standby power management functionality eliminates long boot times • New firmware also adds important Linux multimedia and virtualization upgrades

Fort Lauderdale, FL (PRWEB) June 29, 2009 -- IGEL Technology today launched its new Linux Universal Desktop firmware adding important new power management, multimedia and virtualization functionality to its Linux-based thin client range. New power management functionality allows Linux users to switch their IGEL thin clients into standby mode and back on in seconds, eliminating long boot times. Traditionally thin clients use 51% less power than traditional PCs and this functionality will help save customers even more on power costs and time. The new functionality also brings IGEL's Linux-based IGEL one, UD2 and UD3 thin clients in line with upcoming Energy Star certification for thin clients.

In addition to the power management functionality, IGEL has also included in its firmware integration of the VMware View 3.1 client, which can deliver IGEL Linux users a full virtualized desktop experience. The new VMware client adds support for multimedia acceleration and USB redirection and IGEL is one of the first thin client vendors to integrate the new client into its firmware and to receive VMware certification.

IGEL has also added support for multimedia acceleration and USB redirection to its Citrix ICA 11 client, ensuring IGEL Linux thin client customers using Citrix XenApp or Citrix XenDesktop can enjoy the full multimedia benefits of Citrix HDX technology.

Finally, the new Advanced Package of the Linux Universal Desktop firmware now includes a codec package, which enables playback of the most common video and audio formats, and is also required for the multimedia acceleration feature.

The latest Linux Universal Desktop firmware is available for download free of charge for existing customers at: www.igel.com

About IGEL Technology

IGEL Technology is the world's third largest client vendor by revenue and is market leader in its home country of Germany (2008 IDC). The company produces one of the industry's widest range of thin clients, based on Linux and Microsoft Windows, giving customers access to almost any form of server-based infrastructure and application including virtual PCs from VMware®, Citrix® Xen or Microsoft®, terminal services, legacy applications via Ericom® PowerTerm® terminal emulation, web, Java, SAP and VoIP. Form factors include traditional desktops, integrated LCD units, quad screens and PC to thin client conversion cards.

MvixUSA Launches "Ultio": the Ultimate 1080p UPnP Home Theater Media Player

Mvix(USA), Inc., announces the worldwide launch of the Mvix Ultio, a Hard-Disk Based media center capable of HD digital media playback with video output as high as 1080p and supporting the largest array of AV formats and codecs ever supported by any media player. Ultio's high-end video processing not only plays Blu-Ray quality video, it allows to store entire Hi-Definition media on its internal hard drive, plug it into a TV via a HDMI and enjoy movies, digital music and family photos on large LCD or Plasma. It is also capable of playing unique formats such as AVC-HD (normally used in camcorder footage) or FLAC (the popular, uncompressed audio, craved by audiophiles).

Chantilly, VA (PRWEB) June 29, 2009 -- Mvix(USA), Inc., a market leader in high-definition entertainment, business signage solutions and networked accessible storage devices, announces the worldwide launch of the Mvix Ultio, a Hard-Disk Based media center capable of HD digital media playback with video output as high as 1080p and supporting the largest array of AV formats and codecs ever supported by any media player.

Ultio's high-end video processing not only plays Blu-Ray quality video, it allows to store entire Hi-Definition media on its internal hard drive, plug it into a TV via a HDMI and enjoy movies, digital music and family photos on large LCD or Plasma. The flexibility and scalability of Ultio makes it the easy to play HD movies or home videos. Ultio supports most 1080p HD video codecs, and formats such as H.264, MKV, Dixv HD, MOV, VC-1, FLV, etc. It is also capable of playing unique formats such as AVC-HD (normally used in camcorder footage) or FLAC (the popular, uncompressed audio, craved by audiophiles).

Mvix Ultio is being launched in 2 flavors: the regular version (without a HDD) is priced at \$169, whereas the premium version (bundled with 1TB Hard Drive) will be available at \$259. Speaking on the occasion, Mike Mallon, the business development manager of Mvix (USA), Inc., commented, "Mvix Ultio is the ultimate solution for high definition home entertainment which is likely to redefine the HD Media player market. The aggressive market price bundled with a comprehensive set of features is likely to attract a much larger customers-base than ever before." Ultio is internet-ready and pre-equipped with a network port and an optional Wireless-N capability. It sports a samba server and a UPnP implementation, allowing seamless integration with services like PlayOn® or Tiversity® (for streaming video content from Netflix, Hulu, CBS, Youtube, CNN, ESPN and much more).

Ultio is completely scalable - one can choose upto 1.5TB of media storage in its internal hard disk. Its built-in Torrent Client, combined with basic NAS features makes it an ideal setup for digital media acquisition, storage and sharing. Combined with spectacular picture quality of HD video and crystal clear sound clarity of digital audio, Mvix Ultio provides a complete HTPC experience. Ultio brings a "networking reality" to Media players by enabling network media streaming from shared, password-protected PC folders, NAS or servers. Encompassing distinctive features of a traditional home-theater PC, it offers capabilities like formatting hard-drive, copy, delete, renaming of files and even physical transfer of files between USB storage, network shares, other PC or Mac and simply via the hand-held remote.

Mike further added, "This is our most comprehensive product to-date and we feel very confident about its market

traction. In reality this new model is built by our valued customers - each feature on this device is an outcome of customer feedback on our older models. We are excited about this new product and I am sure our customers will be pleasantly surprised as well."

As part of the General Public License (GPL) agreement, MvixUSA will also make the firmware source-code available to its customers via its Support Center.

Pre-Orders of Mvix Ultio start immediately and it is scheduled to ship in July 1st week. Mvix Ultio will be available at popular retail locations such as Amazon.com, Buy.com, Thinkgeek.com, B&H Photo Video.com and directly from MvixUSA's store.

Colortrac Provide 26 SmartLF Wide Format Scanning Systems for the Lebanese Parliamentary Elections 7th June 2009

In May 2009 Colortrac Ltd, the manufacturer of SmartLF large format scanners and universal copy stations, completed the sale of 26 SmartLF Ci 40m (monochrome) high resolution technical imaging scanners to the Lebanese Ministry of Internal Affairs.

St Ives, Cambridge, UK (PRWEB) June 29, 2009 -- Colortrac provide 26 SmartLF wide format scanning systems for the Lebanese Parliamentary elections 7th June 2009

In May 2009 Colortrac Ltd, the manufacturer of SmartLF large format scanners and universal copy stations, completed the sale of 26 SmartLF Ci 40m (monochrome) high resolution technical imaging scanners to the Lebanese Ministry of Internal Affairs.

The Colortrac SmartLF scanners were supplied as part of an EU (European Union) initiative to assist in the processing of ballot papers cast in the Lebanese Parliamentary elections held on June 7th. With over one and a half million votes cast, a critical requirement was for the scanning to be done in the shortest possible time. The SmartLF Ci 40 was chosen because of its 40" image width, high speed, ease of use and compatibility with the software applications used to count the votes.

Colortrac worked closely with its Lebanese distributor, the Beirut-based Digital Image Solutions (DIS), to provide the best solution for the customer requirement in terms of specification and performance, at an affordable price for the taxpayer. Once it was confirmed that the SmartLF had won the tender, Colortrac staff worked round the clock to provide Digital Image Solutions with the 26 SmartLF Ci 40m large format scanners within the extremely tight delivery schedule.

"I wish I had had a camera with me to capture the expression on the face of the person in charge of the scanning section at the Ministry of Internal Affairs the first time the SmartLF Ci 40m scanners were tested. They were astonished by their scanning speed and image quality and how easy they are to operate" said Elie Saab, Managing Director of Digital Image Solutions.

"Despite the huge number of documents which needed to be processed in a very short time, we did not receive any technical support calls regarding any of the SmartLF scanners said Saab. "This demonstrates the reliability of Colortrac's products. After the election, officials admitted to Digital Image Solutions that the problem-free implementation of Colortrac SmartLF scanners was one of the best projects ever to happen at the at the Ministry of Internal Affairs."

"Digital Image Solutions represent several international brands. The most efficient support we have ever experienced is that supplied by Colortrac's sales and service center. We thank all at Colortrac, especially Peter Sandberg who was a key factor in this deal. Moreover, we thank Colortrac for their loyalty to us as their Lebanese distributor" said Saab.

Peter Sandberg, Colortrac's Business Development Manager for EMEA, (Europe, Middle East, Africa), says "A

wise person once told me "You cannot afford to ignore the small countries - they are too many."

Colortrac has consistently over a long time endeavoured to offer as good service and support to its distributors in small countries as to those in large ones. The result is that Colortrac has a very strong base of dedicated distributors in very many countries."

"In Lebanon, I worked closely with Elie Saab at Digital Image Solutions to provide him with whatever he needed through the whole sales process, to bring his bid to the Ministry of Internal Affairs to a successful conclusion. One of Colortrac's strengths is the dedication of our distribution partners. Their strength is built in part on the support we offer in return. In looking to expand, Colortrac wants to find distributors that we can work successfully with in a similar way."

The SmartLF Ci 40 is Colortrac's latest CIS (contact image sensor) technology scanner. It is designed for high speed scanning of wide format technical drawings, maps and office documents at high resolution. Its unique front-feed, front exit paper handling gives users the easiest and most direct control over document collection of all large format scanners. The speed and simplicity of the SmartLF Ci 40 makes it ideal for one-off walk-up scans as well as high volume production scanning.

While aimed primarily at AEC, CAD and GIS users scanning technical drawings and maps for archiving, file distribution and copying, the SmartLF Ci 40's use in the Lebanese elections demonstrates just how practical and flexible a wide format document scanner it is. It speed greatly enhanced the Ministry of Internal Affairs ability to process the 1.6 million voting forms in the shortest time allowed.

"We are very proud to have played a role, however small, in the democratic process of the Lebanon and we wish all the people there a peaceful and successful future" said Peter de Winter-Brown, Sales & Marketing Director Colortrac Ltd.

About Colortrac ...

Founded in 1989 and based near Cambridge in the UK, Colortrac Ltd is the leading innovator in professional wide format color scanners and image acquisition software solutions. Colortrac was the first large format scanner manufacturer to recognize the individual merits of CIS and CCD image sensor technology. This realization led to the creation of the SmartLF wide format scanner family in 2004. Colortrac SmartLF large format scanners provide affordable solutions for the divergent needs of the Graphic Arts, Reprographics, AEC, CAD, GIS, EDM and FM technical documents scanning markets. Colortrac Ltd has subsidiary offices in Beijing and Suzhou, P.R. China and in Golden, Colorado, USA.

Siemon, Watertown, CT-based Global Manufacturing Leader, and Alteris Renewables Commission New Solar Power Installation

Representatives from Siemon and Alteris Renewables along with members of the public this week "flipped the switch" on a new, state-of-the-art 217kW solar power array at a public ceremony at Siemon's Watertown, CT Corporate Headquarters and North American Manufacturing Campus. The event recognized Siemon's long-standing commitment to green business practices.

Watertown, CT (PRWEB), June 25, 2009-- Representatives from Siemon and Alteris Renewables along with members of the public this week "flipped the switch" on a new, state-of-the-art 217kW solar power array at a public ceremony at Siemon's Watertown, CT Corporate Headquarters and North American Manufacturing Campus. The event recognized Siemon's long-standing commitment to green business practices.

Siemon's President and CEO Carl Siemon, spoke at the ceremony, providing insight on how adopting renewable energy can be both smart environmental policy and smart business. Along with the solar array, he cited the company's ongoing "green" initiatives such as efficient power usage, aggressive recycling and forest land preservation and protection, describing how these efforts provided opportunities to improve bottom line rather than disrupt it. He expressed hope that Siemon's initiatives can serve as a model for other manufacturers seeking to make their operations more sustainable.

Designed and installed by [Alteris](#) and supported in part by a grant from the Connecticut Clean Energy Fund, Siemon's solar power system will reduce the manufacturing operation's dependence on non-renewable energy sources and will provide greenhouse gas reductions of 159 metric tons per year - equivalent to taking 30 automobiles off the road or powering up to 21 homes. In addition, the benefits of greenhouse gas reductions will realized for the next 20 years or more.

After an intensive partner selection process involving several other large solar integrators, Siemon selected Alteris Renewables to implement the system. The selection was based on Alteris' expertise in engineering design, project management and their comprehensive portfolio of successes across a broad base of commercial installations. Alteris' COO Tim Seamans said, "We're proud to be the installer of choice for a company that is paving the way toward a greener manufacturing future in the network cabling sector. By investing in solar, businesses are able to parlay investments into healthy returns and position themselves to be more competitive."

State Senator Robert J. Kane praised Siemon's efforts as a model for other organizations, "We can see the future here today as Siemon proactively goes green and contributes to renewable energy production in Connecticut. And as citizens of Connecticut, we can all take some pride in this accomplishment. Your support of the Connecticut Clean Energy Fund encourages many organizations like Siemon as they build a greener future for the state and the world."

About Siemon

Established in 1903, Siemon is an industry leader specializing in the manufacture and innovation of high quality, high-performance network cabling solutions. Headquartered in Connecticut, USA, with global offices, manufacturing and service partners throughout the world, Siemon offers the most comprehensive suite of copper

(unshielded and shielded twisted-pair) category 5e, category 6 (Class E), category 6A (Class EA) and category 7/7A (Class F/FA), and multimode and singlemode optical fiber cabling systems available. With over 400 active patents specific to structured cabling, from patch cords to patch panels, Siemon Labs invests heavily in R&D and development of industry standards, underlining the company's long-term commitment to its customers and the industry.

About Alteris Renewables

[Alteris Renewables](http://www.alterisinc.com) is a full service renewable energy systems integrator and project developer. With more than 2250 completed installations throughout the Northeast over the past 30 years, Alteris provides PV (photovoltaic, solar electric), solar thermal, and wind energy solutions for commercial, residential, education, municipal and institutional clients. The company has industry-leading expertise in engineering, design, project management, performance analysis, project financing and renewable energy credit programs. For more information, please visit <http://www.alterisinc.com>.

Alteris is a portfolio company of Riverside Partners, a Boston-based technology and healthcare private equity firm. For more information, please visit <http://www.riversidepartners.com>.

Guard RFID Integrates Active RFID and Milestone Video for Healthcare Security and Access Control Visibility

Unique convergence of active RFID and IP Video provides complementary security to healthcare institutions and patients and industrial asset tracking.

Vancouver, BC (PRWEB) June 27, 2009 -- Guard RFID Solutions Inc., announced today that its next generation [Active RFID](#) platform and its software applications, such as its TotGuard™ Infant Security solution, can integrate closed circuit television (CCTV) where increased security is required.

Vice President of Sales Beth Bandi explains, "Security and Access control systems are enhanced by presenting a live video stream from a CCTV camera placed at the location associated with an alarm or warning event within a system, as well as providing video images of activity in that location immediately prior to the event." Continuing, she said, "Instantaneous visibility of such activity allows staff to immediately respond to the event, saving precious time. All such video streams are captured and archived for subsequent review, if ever required."

Bandi went on to say that integrating active RFID and video surveillance is of particular value for clients who use GuardRFID's leading-edge [TotGuard™](#) Infant Protection solution, the only infant security system that offers disposable active tags.

"Beyond patient and resident safety using our fast perimeter control system, the addition of video also greatly enhances our asset tracking offering," says Bandi. "Multiple mission critical parts can now be tracked quickly and accurately in the area of coverage, and also have the added security of video imaging linked to the [rfid asset tag](#)." Bandi added, "Parts and equipment can now be locked down to an area and the image of their path creates a visual confirmation of movement and of persons associated with that movement."

GuardRFID has integrated their [active RFID solution](#) with the world-leading open platform IP video management software, Milestone XProtect™. This means that the GuardRFID video imaging records also include time stamps, for quickly locating such records when required. In a scenario, there may be an attempted unauthorized removal of an infant from a secured area. This would result in an alarm condition initiated by GuardRFID's system, and the Milestone video would give verification of this activity. Alerts can also be sent to remote devices such as a laptop, mobile handheld PC, or smart phone, where the video can be viewed to identify the situation in real time. The GuardRFID system is able to automatically control door or elevator access to prevent such unauthorized activity.

"This is a unique convergence for two leading-edge technologies -- RFID and IP Video -- whereby video surveillance complements RFID to provide a safe environment related to healthcare institutions and patients. The alert generated by the RFID tag is supported with a real-time video image and archived records to become an integral part of patient monitoring in the healthcare field," states Reinier Tuinzing, Distribution Manager at Milestone Systems. "Milestone is very excited that GuardRFID has chosen to integrate to the Milestone open platform, which also allows them to leverage the existing 100 Milestone Solution Partner integrations for offering

even greater value to the GuardRFID solutions."

"We continue to offer our customers and dealers the most technically advanced, active RFID products along with applications like video streaming that create a complete package specific for their use," concluded Bandi.

About Milestone Systems

Founded in 1998, Milestone Systems is the leading global developer of open platform [IP video](#) management software. XProtect™ gives users a powerful surveillance solution that is easy to manage, reliable and proven in more than 50,000 customer installations. With support for the industry's widest choice in network hardware and integration with other systems, XProtect provides best-of-breed solutions to "video enable" organizations - reducing costs, optimizing processes, protecting people and assets. With headquarters in Denmark and ten international offices, Milestone software is sold through authorized partners in 90 countries. For more information, please visit www.milestonesys.com.

About Guard RFID Solutions

GuardRFID develops Active Radio Frequency Identification (RFID) technologies and products for Healthcare and Enterprise applications. GuardRFID's products can accurately track and locate assets and people, and are used for enhanced automation, workflow, monitoring and security solutions. GuardRFID's ability to support multiple applications on its platform positions the company to be able to offer combined people and asset solutions all on the same infrastructure. Founded in early 2007, GuardRFID introduced the first low-cost disposable Active RFID tags to the market, eliminating the need to recycle tags, and allowing for mass deployment for a reasonable investment. GuardRFID Solutions is federally incorporated in Canada, with its head office in the Province of British Columbia, and its Sales office in Atlanta, GA.

Additional information regarding GuardRFID products and services can be found on its website www.guardrfid.com.

Guard RFID Releases the First Ever Tamper Resistant Umbilical Tag for its TotGuard™ System

Leading-edge TotGuard™ Infant Protection solution now has an active RFID based tamper resistant umbilical tag, with a built-in tamper alert mechanism. The first, and only tamper-detecting umbilicus tag on the market, the tag is designed to thwart infant abduction attempts, by sensing the removal of the tag placed on the umbilicus of a newborn.

Vancouver, BC (PRWEB) June 27, 2009 -- Guard RFID Solutions Inc., announced today that its leading-edge [TotGuard™ Infant Protection](#) solution now has an active RFID based tamper resistant umbilical tag, with a built-in tamper alert mechanism. The tag is designed to thwart infant abduction attempts, by sensing the removal of the tag placed on the umbilicus of a newborn. This is the first, and only, tamper-detecting umbilical tag in the market.

Vice President of Sales, Beth Bandi said, "Our exclusive tamper mechanism alerts caregivers if a tag has been altered, tampered with or removed, allowing them to take immediate action to keep the infant secure". Guard RFID's tamper resistant umbilical tag is designed to sit unobtrusively on the infant's umbilicus, where it does not obstruct care.

Bandi explains, "The tag is placed within a pod that is attached to the umbilical clamp, which is clipped on the newborn's umbilicus at birth. The Pod protects the tag, so that it can be cleaned easily. The pod is disposed after use, and so is not required to go through any costly sterilization and disinfecting processes. This is yet another step we have taken towards assisting healthcare facilities in their efforts to try and eliminate cross-infection between patients."

Bandi continued, "We have added another level of security to ensure TotGuard offers the most complete and reliable infant protection available". The TotGuard Infant Security system uses the only Disposable tamper-detecting Infant Tags on the market.

About [Guard RFID Solutions](#)

Network Inventory Advisor 3.5 by ClearApps: the Same Efficient Network Inventory and a Bunch of New Features

ClearApps LLC (Elk Grove, CA), innovative software manufacturer, specializing in network software utilities, announces the release of Network Inventory Advisor 3.5

Elk Grove, CA (PRWEB) June 26, 2009 -- ClearApps LLC (Elk Grove, CA), innovative software manufacturer, specializing in network software utilities, announces the release of Network Inventory Advisor 3.5

"This is a totally new version of our network inventory solution," stated Jeff Mitchels (CEO of ClearApps), "...which has a new name now. We added long-awaited features and fixed more than 200 bugs both reported by our users and found by our test lab specialists."

The new version features multiple major and minor improvements: you can add any searchable user-defined data to your nodes, and later on use these data fields in your reports. Custom fields can be used to denote whether a node has a UPS or scanner attached (or needs one), specify asset acquiring date, service tags, warranty periods and much more.

Support of SNMP protocol and SNMP-powered devices was added and network devices scanning can be fully automated.

The new version of the program features command-line interface. It's another great way to integrate Network Inventory Advisor into your current auditing solution, accounting system or configuration management database.

The detailed list of numerous other enhancements is available in the User Guide and the company's blog. Version 3.5 is a must-have update for all current users. And all the companies and individuals seeking to have full control on their IT budgets are welcome to try the full-featured 15-day free trial of Network Inventory Advisor.

Pricing and Availability

Network Inventory Advisor 3.5 is a multi-OS inventory solution, the software itself runs in Windows. Further information on the product, as well as its free trial edition, is available at <http://www.clearapps.com/>

For precise information on the price of various license types please visit <http://www.clearapps.com/pricing.html>

About ClearApps LLC:

ClearApps LLC is a privately owned software developer, specializing in network software utilities. Network Inventory Advisor, their major product, is used in more than 150 countries worldwide and is translated in 7 languages. For more information please visit the company's website at <http://www.clearapps.com/>

NOTE TO EDITORS: Please, let us know if you have questions or would like any additional information on Network Inventory Advisor 3.5. Contact Jeff Mitchels at [jeff @ clearapps.com](mailto:jeff@clearapps.com). A free license for a review is available upon request.

Eurotech Presents Aurora, the New Petascale Supercomputer that Sets a Landmark in High Performance Computing

Eurotech, one of the leading companies in Embedded and High Performance Computing, presents Aurora, the revolutionary HPC system for installations of any size, up to multiple PetaFLOPS

Hamburg, Germany (PRWEB) June 26, 2009 -- Eurotech, a leading provider of special purpose computing platforms, today unveiled Aurora, a revolutionary supercomputer that sets the pace for performance and efficiency. Aurora is packed with the most advanced solutions, such as quad-core high performance Intel® Xeon® 5500 processors series, 100Gbps per node bandwidth capacity, programmable on-node acceleration, multi-level synchronization networks and direct liquid cooling. Aurora sets a new standard of excellence in high performance computing.

"The Aurora supercomputer breaks the rules by removing the bottlenecks that limit the performance, efficiency and scalability of traditional systems", said Giampietro Tecchiolli, CTO and VP of Eurotech. "Its advanced technology permits unprecedented effective performance, sets a record for footprint reduction and radically cuts the total cost of ownership for installations of any size, with energy savings as high as 60%."

"The Aurora project is the result of a multi-group effort and we are excited that the unique features of the Intel Xeon 5500 series processor have become the base for such an innovative supercomputer system architecture. The Intel Xeon 5500 series brings up the bar considerably by turning the chip into a intelligent, adaptable part of the server solution," said Richard Dracott, general manager of Intel's High Performance Computing Group.

Aurora takes full advantage of the latest high performance, power efficient Intel Xeon 5500 processors series.

The new generation processor is Intel's most revolutionary server processor since the introduction of the Intel Pentium® Pro processor 14 years ago. It can automatically adjust to specified energy usage levels, speed-up data center transactions and customer database queries thanks to new features such as Intel Turbo Boost which increases system performance based on the user's needs, and Integrated Power Gates that turn off unused cores to save electricity and reduce heat. In particular, Intel® Turbo Boost is a feature that allows the processor to operate at higher speeds if a workload needs it and as long the processor isn't operating above its power and thermal limits. This allows the CPU to dynamically deliver additional performance above the base frequency if needed.

The Intel Xeon processor 5500 series also takes intelligent power to a new level with up to 15 automated operating states. These create significant improvements in chip power management by adjusting system power consumption based on real-time throughput and without sacrificing performance.

In addition, the user-friendly software environment is fully compatible with most existing HPC codes and tools, and requires minimal or no porting for near optimal performance. Extra acceleration is available using the integrated programmable accelerator.

Eurotech introduces the Unified Network Architecture™ (UNA) in Aurora, which offers dramatic advantages

over conventional HPC systems by radically improving performance and feature set. At the same time, the UNA reduces the number of physical and logical layers for exceptionally low memory to memory latency.

In each node, the UNA integrates a 60Gbps switchless 3D torus, a 40Gbps switched Infiniband® network, three multilevel synchronization networks and a programmable network processor. User-programmable logic transparently enables the optimal routing of data packets and manages the multilevel synchronization networks, for seamless scalability up to multiple PetaFLOPS.

Another exciting innovation is the Aurora direct liquid cooling system, which eliminates vibrations and rotating parts while providing precise control over component temperature. By removing the typical sources of failure in traditional HPC systems - even the on-node storage is solid-state - and thanks to the embedded redundant design, Aurora is exceptionally reliable.

Aurora is one of the greenest HPC systems on the market: its efficient design is both light on the energy bill, eliminating the additional costs of traditional cooling, and also makes it possible to squeeze as much number crunching as possible from every Watt. Moreover, Aurora is environmentally conscious and so compact that even PetaFLOPS installations may be possible in existing locations, allowing a sustainable growth in performance and preservation of existing assets.

Come and see a live Aurora demo at ISC 09 (www.supercomp.de), Intel® Booth 430

Developed by the Alliance of Eurotech, PSI RAS, RSC SKIF with support from Intel® : "Aurora", "SKIF series 4", and "SKIF-Aurora" are different trademarks of the same product in different geographical areas

For more information, please visit the Eurotech website at www.eurotech.com/aurora

Lyra's Senior Analyst Steve Reynolds Examines the 'State of the Printer Market' at the Samsung Executive Partners Conference

Lyra Research (www.lyra.com), the digital imaging authority, announces that Lyra Senior Analyst Steve Reynolds will be a featured speaker at the 2009 Samsung Executive Partners Conference (<http://www.regonline.com/builder/site/Default.aspx?eventid=652471>). The conference will be held July 6-8, 2009 at The Georgian Bay Club in Clarksburg, Ontario, Canada. The executives attending the event will represent Samsung's network of VARs, printer-focused resellers, BTA dealers, and distributors.

Newton, MA (PRWEB) June 26, 2009 -- Lyra Research (www.lyra.com), the digital imaging authority, announces that Lyra Senior Analyst Steve Reynolds will be a featured speaker at the 2009 Samsung Executive Partners Conference (<http://www.regonline.com/builder/site/Default.aspx?eventid=652471>). The conference will be held July 6-8, 2009 at The Georgian Bay Club in Clarksburg, Ontario, Canada. The executives attending the event will represent Samsung's network of VARs, printer-focused resellers, BTA dealers, and distributors.

In his Wednesday, July 8 presentation, Reynolds will discuss the state of the printer market. Specifically, Reynolds will examine digital imaging industry topics such as the future of the copier and printer business, the latest solution offerings, marketplace trends, and the role of managed print services.

"I am looking forward to speaking at the Samsung Executive Partners Conference, and I appreciate the opportunity to provide Samsung's network of VARs, resellers, dealers, and distributors with insight and analysis regarding the products and the trends that are shaping the printer and digital copier industries," said Reynolds, senior analyst for Lyra's Hard Copy Industry Advisory Service. "With the transformation that is currently taking place in the digital imaging industry, I feel it is important to discuss where the printer business is headed over the next five years, what's hot and what's on the decline, the issues that distribution channels face, and potential sales opportunities."

Lyra Research: The Digital Imaging Authority

Lyra Research collaborates with imaging industry decision makers worldwide, enabling clients to strengthen their market position and achieve profitable growth. Lyra's expert analysts and editors help clients devise and implement creative solutions to business challenges, arming them with competitive intelligence, strategic and tactical advice, news and analysis, and market forecasts.

Since 1991, Lyra's custom research and consulting, advisory services, award-winning journals, and innovative events have set the standard for analysis of imaging hardware, consumables, and digital photography markets.

Vestac Releases Industry's First Multi-Modal Wi-Fi and Infrared Wireless Tracking System

Vestac LLC of Brick, New Jersey announced today the general availability of the industry's first FCC approved, multi-modal Wi-Fi and Infrared (IR) Real Time Locationing System (RTLS). This unique, patent-pending RFID capability combines high accuracy Wi-Fi positioning algorithms and IR's inherent lower cost "choke point" tracking.

Brick, NJ (PRWEB) June 25, 2009 -- Vestac LLC of Brick, New Jersey announced today the general availability of the industry's first FCC approved, multi-modal Wi-Fi and Infrared (IR) Real Time Locationing System (RTLS). This unique, patent-pending RFID capability combines high accuracy Wi-Fi positioning algorithms and IR's inherent lower cost "choke point" tracking. Coupled with long battery life Vestac provides for a flexible, easy to deploy positioning solution for the lowest total cost of ownership. The system has already received advance orders from several large enterprises for tracking people, inventory, and equipment.

The 220Bi tag and 330Xi battery-operated IR transmitter support simultaneous tracking through Wi-Fi and IR, and overcoming the limits of traditional RFID tags. This allows for a low-cost deployment and delivers a high level of accuracy even in areas with relatively sparse Wi-Fi coverage. The 220Bi tags can be worn by personnel or affixed to assets and are available in several form factors, which can be customized to specific requirements. The 220Bi and the 330Xi transmitter form a unique "Deploy and Go" architecture which requires no additional network modifications or expensive wiring.

The 220Bi is compatible with Wi-Fi networks offerings from Cisco Systems, Aruba Networks, Trapeze Networks, Meru Networks and other vendors. However, it can also be optionally deployed in a unique IR only mode.

Vestac's tracking technologies have been purchased by several large hospitals, universities and by a Fortune-50 client for deployment in various market segments including manufacturing, education, warehousing, healthcare, transportation logistics, government and military. Vestac has already signed Mobile Matrix Inc. (www.mobilematrix.com) as their first distributor of the products. Mobile Matrix is a leading provider of location-aware enterprise class software suites for improved asset management and business productivity.

About Vestac:

Vestac, a privately-held technology company founded in 2006, is seeking highly qualified Distributors and Resellers in order to expand the company's reach throughout the world. Contact the company at info @ vestac.com for further information or access their website at www.vestac.com.

Konica Minolta's magicolor 7450 II grafx Receives Two 2009 BERTL'S Best Awards

Color Printer to be Featured at 2009 HOW Design Conference June 24-27 - Booth #520 - Austin Convention Center, Austin, Texas

Austin, Texas (Vocus) June 24, 2009 -- Konica Minolta Business Solutions U.S.A., Inc. ([Konica Minolta](#)), a leading provider of advanced imaging and networking technologies for the desktop to the print shop, today announced BERTL® Inc ([BERTL](#)) has awarded two 2009 BERTL's Best Awards to the magicolor® 7450 II grafx. Earning awards for "Best Digital Imaging Workgroup Color A3 Printer" and "Best Value for Price Color A3 Workgroup Printer in Segment 2", the [magicolor 7450 II grafx](#) is recognized for delivering superior color quality and reliability at a low cost of total ownership tailored for graphic arts professionals.

Keeping with the times and the demands of its end users BERTL left behind the simple speed and feed productivity, artificial reliability tests and theoretical SRP pricing lists and focused on the user and the business dynamics when putting together their 14th annual "Best of the Best." The magicolor 7450 II grafx was awarded its 2009 BERTL's Best recognition in part due to the following achievements:

- High-Performance in both Color and B&W with speed up to 24.5 ppm
- PANTONE® color tables for accurate stand-out proofs and commercial quality documents
- Photorealistic Quality with 9600 X 600 dpi-Class and Image CMYK gray feature for pure black non-text objects
- Supports page sizes up to 12.25" x 18" for full-bleed designs, and 12.25" x 47.24" for banner-size

"Congratulations to Konica Minolta on these two prestigious and well deserved BERTL's BEST Awards," said Margie Davis, Managing Director, BERTL, Inc. "The BERTL team of analysts found the magicolor 7450 II grafx to be extremely competitive in price and outperformed competitive products available to the design professional."

"Konica Minolta is honored to receive two BERTL's Best Awards for the magicolor 7450 II grafx," said Richard Miller, Vice President, Printer Sales, Konica Minolta Business Solutions U.S.A., Inc. "These key awards represent our ongoing, strong commitment to the creative sector, and prove to our graphic arts customers that they can count on Konica Minolta for all of their color imaging needs."

In addition at the conference, Yonca Kocak, Assistant Product Marketing Manager for Konica Minolta of the magicolor 7450 II grafx on will present a live product showcase in Room 17 on Thursday, June 25th, from 10:25a - Noon CT. As part of her presentation, Kocak w will explain how the magicolor 7450 II grafx attains near-photographic print quality and provides you with advanced graphics imaging capabilities.

See the magicolor 7450 II grafx in action at the 2009 HOW Design Conference in Konica Minolta's booth (#520) from June 24-27. To schedule an interview and/or a demonstration during this event, please contact James Norberto at 201.825.4000 or PR @ kmbs.konicaminolta.us .

About Konica Minolta

Konica Minolta Business Solutions U.S.A., Inc. is a leader in advanced imaging and networking technologies for the desktop to the print shop. For the second consecutive year, Konica Minolta was recognized as the [#1 Brand for Customer Loyalty in the MFP Office Copier Market](#) by Brand Keys. For more information, please visit www.CountOnKonicaMinolta.com.

About BERTL

BERTL® Inc. is a leading source for objective, independent product evaluation reports and comparative analyses on digital imaging devices and workflow solutions. BERTL's evaluation reports, customer satisfaction research, awards and product ratings are undertaken entirely at BERTL's expense for the benefit of its international subscriber base.

At all times, BERTL's primary focus is the end user. Covering all major digital imaging manufacturers, BERTL publishes the world's most extensive Web site of evaluation reports, comparisons data, vertical market research, news and more on copiers, printers, MFPs, production and workgroup scanners, fax machines, color and production equipment and wide format devices. BERTL reports, research and other industry informative services are available in a range of specialized subscription services. To learn more about BERTL, visit www.BERTL.com, or telephone +1 973.882.0200.

GL Announces Enhanced Call Capture and Analysis Software for T1, E1, and Analog

GL Communications Inc., announced today the release of [Enhanced Call Capture and Analysis for T1 E1](#) software and hardware

Gaithersburg, Maryland (Vocus) June 24, 2009 -- GL Communications Inc., announced today the release of [Enhanced Call Capture and Analysis for T1 E1](#) software and hardware that allows triggered recording of calls, either automatically or manually directly from T1, E1, or Analog lines. Briefing the news to the press Mr. Vijay Kulkarni, President of GL said, "The Enhanced Call Capture and Analysis (CCA) application can initiate triggered recording of calls, either automatically or manually directly from T1 E1 Analog lines. The application uses any of three platforms: HD PCI Ultra T1 E1 Cards, or GL's USB Portable T1 E1 Analyzer Units, or Universal T1 E1 Analyzer Cards. Any of these platforms can interface non-intrusively with T1 E1 Analog lines. Automatic call capturing can be triggered from either direction of transmission, east or west".

Mr. Kulkarni further added, "The application provides auto capturing support. After capture, captured calls can be played back and analyzed in time and spectral modes using a commercial sound card, built-in high fidelity speakers, and audio viewing software such as Adobe Audition or Goldwave. CCA software works in conjunction with the CMU (Call Management Utility), to automatically identify captured calls and calls being captured. Users can listen to calls that are in progress. The CMU is especially helpful when a large number of calls are captured such as over a weekend or on many trunks".

Some of the Important features:

- Automatic or manual initiation of call recording
- Real-time display of signaling bits for all channels in both directions
- 'Scan' or 'Channel' mode for call initiation detection and capture
- User specified record time
- Automatic termination of recording, or Manual termination
- PCM data captured to two synchronized disk files (east and west directions) for post processing

Applications:

- Call recording for post analysis
- Analysis of single/dual tones, DTMF and MF digit analysis (frequency, power, duration)
- Analysis of call quality (speech levels, noise levels, echo return loss, speech clipping, impulse noise, and other impairments)
- Call activity, call density, and call volume analysis

For comprehensive information on the application, please visit [Enhanced Call Capture and Analysis for T1 E1](#) web page.

About GL Communications Inc.

Founded in 1986, GL Communications Inc. is a leading supplier of test, monitoring, and analysis equipment for TDM, Wireless, IP and VoIP networks. Unlike conventional test equipment, GL's test platforms provide visualization, capture, storage, and convenient features like portability, remotability, and scripting.

GL's TDM Analysis & Emulation line of products includes T1, E1, T3, E3, OC-3, STM-1, analog four-wire, and analog two-wire interface cards, external portable pods, and complete system solutions. Capabilities include voiceband traffic analysis and emulation across all traffic types (voice, digits, tones, fax, modem), all protocols (ISDN, SS7, GR-303, Frame Relay, HDLC, V5.X, ATM, GSM, GPRS, etc.), and with capacities up to thousands of channels.

GL's VoIP products generate / analyze thousands of calls simultaneously with traffic types such as voice files, digits, video, tones, noise, and fax using G.711, G.729, AMR, EVRC, GSM and a range of other codecs. Additional features include visual analysis, real-time listening, and recording. The product line also includes a Software Ethernet Testing capability that checks frame transport and throughput parameters of Ethernet and IP networks.

GL's Voice Quality Testing (VQT) product line complements all of GL's products. Using ITU-standard algorithms (PAMS, PSQM, and PESQ), GL's VQT provides a widely excepted solution across the telecom industry. Voice Quality Testing across multiple networks (T1, E1, T3, E3, OC-3, VoIP, Wireless, and Landline) are all available.

GL's Wireless Products perform protocol analysis and voice quality assessment on GSM, CDMA and UMTS networks. Connections can be made to any wireless phone with automated call control, GPS mapping and real-time signal measurements.

GL's Echo Canceller testing solutions provide the broadest range of simulation and analysis, including compliance testing per G.168 and G.160 across TDM, IP, VoIP and Wireless networks. GL's wirelss VQT solutions help assessing impairments to voice quality such as poor mobile phone quality, voice compression and decompression algorithms, delay, loss and gain in speech levels, noise, acoustic and landline echo, and other distortions are easily assessed and accurately measured.

GL's Handheld data testers can test a wide variety of communications facilities and equipment including T1, fractional T1, E1, fractional E1, T3 and E3 modems, multiplexers, CSU, DSUs, T1 CSUs, DTUs, NTUs and TIUs and more. The testers provide convenience, economy, and portability for almost any interface, including RS232, RS-422, RS-530, X.21, T1, E1, T3, E3, and many others.

GL's Network Surveillance and Monitoring products include Probes for TDM, IP, VoIP, ATM, and Wireless networks. An open standards based approach provides a scalable, feature rich, real-time access to network intelligence. Centralized or distributed access, efficient transport and database loading allow compatibility with 3rd party and standards based monitoring systems.

Advanced Systems Group Sees New Business Growth

ASG Builds Work Force in Northwest Region to Support Growing Business

Denver, Colorado (PRWEB) June 25, 2009 -- Advanced Systems Group (ASG) <http://www.virtual.com>, the Denver-based IT consulting, integration, and project management firm, today announces it has hired Doug Olson as the new account executive to fill out the sales team in its Portland office and support expanding growth in the Northwest region.

Patrick Smith, Vice President of Sales, explains, "The Portland and Seattle offices we added fairly recently have quickly become a successful and well-established source of business for ASG in the Northwest region."

"Our teams there have done a great job of helping clients balance their IT needs with their overall revenue goals. That has certainly been a significant contribution to our growth and success, says Smith.

In nearly two decades of experience, Doug Olson has helped his clients develop into more responsive, productive, and resilient companies. He has centered his career on assessing client needs and pursuing customer satisfaction as a top priority. Previously, Olson worked for well-known organizations like Sprint Business Services and Sun Microsystems.

As a new ASG account executive, Olson will focus on developing new business throughout the Northwestern United States. He will specialize in building rapport with customers, and effectively communicating highly complex technical and business concepts to all levels of organizations.

Olson is one of several new account executives and systems consultants ASG hired recently to support a 32 percent increase in its customer base this fiscal year and new professional services certifications for the company. Earlier this year, ASG became the first Certified Solutions Provider for the Hitachi Content Archive Platform. Other new account executives and systems consultants join ASG offices in Denver, Houston, Los Angeles, and Oklahoma City.

ASG is a leading provider of enterprise IT consulting, architecture services and complete IT infrastructure solutions. As a consistent member of the VAR Business Top 500, ASG pursues active involvement in the industry, maintaining the highest level of engineering certifications with partners and the vendor community.

About Advanced Systems Group (ASG)

Since 1981, Advanced Systems Group (ASG) has provided complete Information Technology (IT) solutions including comprehensive consulting services, successful storage and data management solutions, assessments and implementation services. In particular, ASG focuses on customer needs, customizing unique solutions for companies and successfully addressing their particular IT challenges. Headquartered in Denver, Colorado, Advanced Systems Group (ASG) also has offices throughout the western and southern United States including Baton Rouge, Boise, Colorado Springs, Houston, Los Angeles, New Orleans, Oklahoma City, Orange County,

Phoenix, Portland, Seattle, Salt Lake City, and San Diego. To learn more, visit <http://www.virtual.com>.

TelcoBridges Partners with Leading European Reseller Halo Kwadrat to Deliver High-Capacity Open Source Applications in Central Europe and Russia

HALO Provides Regional Service Providers with High-Density, Carrier-Grade Solutions Based on TelcoBridges Tmedia Platform

Montreal, Canada (Vocus) June 25, 2009 -- [TelcoBridges](#)TM, the preferred hardware and software supplier for telecom system integrators, solution developers and service providers, today announced its partnership with Halo Kwadrat, a leading European reseller specializing in open source telephony solutions. Halo is adding TelcoBridges' high-capacity platform to its portfolio, to deliver turnkey, carrier-grade solutions to local service providers throughout Central Europe, Germany, Switzerland, Austria and Russia.

As leading major European reseller of Open Source Telephony solutions, Halo Kwadrat provides software, hardware, training and support to Integrators and service providers. Halo differentiates itself by offering cutting-edge products, competitive pricing, fast delivery, and by providing the expertise required to obtain certifications needed to enter the Russian enterprise and carrier space.

Halo Kwadrat has chosen to resell TelcoBridges' Tmedia TMG3200 to address the high density, high capacity, and carrier-grade reliability requirements of its customers. Many service providers within these regions seek the functionality to provide revenue generating services - such as IP PBX, conferencing, voice and messaging services, signalling, least cost routing and other value-added voice applications; and they prefer the flexibility of an open development environment.

"Our targeted markets in Central Europe, Germany, Switzerland, Austria and Russia are all demanding cost-effective, yet highly reliable product architectures like those being developed and delivered by Halo," said Michal Bielicki, Chief Open Source Officer at Halo Kwadrat. "Our solutions provide a rock solid alternative to costly legacy telephony platforms, which are prohibitively expensive and complicated. By adding TelcoBridges' products, we can guarantee flawless, high-end communications for large and mid-size providers looking at open source alternatives."

"Halo is well respected throughout the markets they serve, and they're true innovators when it comes to open source technology," states Gaetan Campeau, President & CEO of TelcoBridges. "By leveraging TelcoBridges' flexible and scalable carrier-grade technologies, Halo can now offer more reliable, higher capacity systems that are typically not seen in open source configurations, thus providing their service provider customers with a more cost effective alternative for creating new revenue streams."

About TelcoBridges:

[TelcoBridges](#) is clearly defining the future of communications technologies. By supplying the industry's best telecom platform, TelcoBridges is helping telecom developers and integrators of VoIP and TDM solutions realize their bright ideas. TelcoBridges' customers develop and deploy carrier-grade telecom solutions for some of the world's largest operators in over 45 countries. These solutions include: mobile value-added services,

location-based services, video calling applications, network monitoring, media gateways, switching, IVR, unified communications solutions, and more. For additional information, please visit www.telcobridges.com.

MindXchange Joins Consonus Partner Program to Provide Secure Email Archiving Solution

Consonus Technologies today announced that MindXchange of Maryland has signed on as a Channel Partner for Consonus SAFE™ Secure Archiving for the Enterprise™.

Cary, NC (PRWEB) June 25, 2009 -- Consonus Technologies today announced that MindXchange of Maryland has signed on as a Channel Partner for Consonus SAFE™ Secure Archiving for the Enterprise™ that utilizes Symantec's Enterprise Vault and delivers it as a service.

Founded in 2009, MindXchange is a national provider of on-demand Software as a Service (SaaS), hybrid and on-premise messaging and collaboration solutions. MindXchange specializes in Microsoft Exchange 2007, SharePoint and compliant archiving solutions.

Through the Consonus Channel Partner program, the company makes more widely available its sizable investment in its highly-available Tier IV SAS 70 Type II data centers. Like all Consonus managed services, SAFE™ is securely housed in Consonus' national data centers and SAFE™ employs the industry's leading email and content archiving solution: Symantec Enterprise Vault, which has been adopted by more than 10,000 organizations globally and each year is recognized by leading analyst firms for its archiving and e-discovery leadership.

President and CEO of MindXchange, Bryan Mulvenna, states "The combined expertise of Consonus and MindXchange will enable customers to access current, best-of-class technology without the substantial capital expense and burden associated with managing on-premise installations". "SAFE™ offers an affordable pricing model - including minimal up-front capital investment and pay as-you go software storage and services, faster data recovery through high-speed provisioning, smaller data stores, and no extraneous email archiving on individual desktops or laptops."

Consonus SAFE™ is a remotely hosted and managed intelligent email and file archiving solution designed to store, manage, and discover corporate data - addressing today's most acute archiving challenges. With SAFE™, Consonus and MindXchange customers will achieve improved operational efficiency, increase profitability and satisfy regulatory requirements.

"Today's businesses require services like Secure Archiving For the Enterprise™ and should be looking to more SaaS solutions because they increase reliability and minimize risk while significantly reducing operational costs" declared Will Shook, Executive Vice President of Consonus. "The natural evolution of software delivery combined with today's economic conditions further validates SaaS as the only choice for customers; allowing them to focus resources on their core business. Consonus customers have always been able to trust that their technology environment is constantly delivering ROI and providing a level of reliability that until recently, was only afforded by Fortune 500 firms. We are thrilled to partner with MindXchange to address more customers' needs."

About Consonus Technologies

Consonus Technologies, Inc. is a leading national provider of IT infrastructure, data center hosting, colocation,

and managed services solutions based in Cary, NC. Offering a comprehensive suite of IT infrastructure services, combined with highly secure and reliable data centers across the country, Consonus provides customers with complete solutions addressing disaster recovery and data center availability, manageability, and consolidation. Visit Consonus Technologies on the Web at www.consonus.com.

About MindXchange

MindXchange provides on-demand Software as a Service (SaaS) and on-premise messaging and collaboration solutions. Regardless of email platform, company size, industry, or geography, MindXchange helps firms re-focus resources on critical business initiatives and core competencies; while at the same time providing fixed, predictable costs and guaranteed uptime. Visit MindXchange on the Web at www.usmindXchange.com.

Real Digital Media to Deliver Integrated Digital Signage Display Powered by NEOCAST

Solution eliminates requirement for additional hardware when implementing a digital signage network

Sarasota, FL (PRWEB) June 25, 2009 -- Real Digital Media, a leading provider of next generation digital signage products for establishing point-of-purchase marketing, promotions and corporate communication networks today announced the availability of an all-in-one digital signage display combining the Samsung MXn-series LCD displays with NEOCAST® Media Player software.

The combined solution includes a range of Samsung's industry-leading MXn-series displays with embedded PC, and Real Digital Media's NEOCAST® Media Player software. This turnkey solution provides an elegant option for customers seeking a digital signage application to promote their business, products and services. Real Digital Media's NEOCAST® digital signage platform is recognized throughout the industry for its ease of use, reliability and performance.

Michael Baron, President of Real Digital Media states, "We are pleased to support Samsung's all-in-one display device with our NEOCAST® solution. The solution eliminates the need for a separate PC or media player, making it easier than ever to seamlessly integrate into a working environment. Furthermore, this opens the NEOCAST® digital signage platform to a broad array of distribution channels that have been searching for a straightforward digital signage solution to meet customer demands."

The embedded PC will be pre-installed with the Windows XP Embedded Operating System and the NEOCAST® Media Player firmware. At installation, the display is simply connected to a broadband source, and it is ready to communicate with the NEOCAST® Media Server. The NEOCAST® Media Server is delivered as a Software as a Service (SaaS), and is designed to manage the network, content downloads and playlists.

Availability:

To learn more about this solution, please contact your Samsung representative or Real Digital Media at info (at) realdigitalmedia (dot) com or 941.951.0130.

About Real Digital Media:

Real Digital Media (RDM) provides next generation digital signage products that power many of the industry's fastest growing point-of-purchase marketing, advertising and corporate communication networks.

Our family of NEOCAST® digital signage products store, deliver and play content in a wide range of digital formats on a variety of display devices. With NEOCAST® players and software, your customized content and programming can scale across entire narrowcast networks down to individual displays, providing ultimate flexibility in reaching customers with your targeted messaging at the right place, at the right time. For more information, please visit us at www.realdigitalmedia.com.

About Samsung Electronics America Information Technology Division:

Samsung's Information Technology Division (ITD) is one of the fastest growing IT companies in the U.S., and is committed to serving the IT needs of consumers ranging from the home user to the Fortune 500 elite, and supports the valued channel partners who serve our customers. Offering innovative solutions and award-winning designs, Samsung ITD presents a complete line of award-winning color and mono-laser printing solutions, desktop monitors, notebook computers, digital signage solutions and projectors. Based in Ridgefield Park, N.J., ITD is a division of Samsung Electronics America (SEA), a U.S. subsidiary of Samsung Electronics Company, Ltd. (SEC). For more information, please visit www.samsung.com or call 1-800-SAMSUNG.

About Samsung Electronics Co. Ltd.:

Samsung Electronics Co., Ltd. is a global leader in semiconductor, telecommunication, digital media and digital convergence technologies with 2007 consolidated sales of US\$105 billion. Employing approximately 150,000 people in 134 offices in 62 countries, the company consists of two main business units: Digital Media & Communications and Device Solutions. Recognized as one of the fastest growing global brands, Samsung Electronics is a leading producer of digital TVs, memory chips, mobile phones and TFT-LCDs. For more information, please visit www.samsung.com.

Upsite Technologies Expands its Cabinet Recirculation Research to Demonstrate Significant Impact of Blanking Panels on Energy Efficiency and Cost Savings

Upsite added to its HotLok® Blanking Panel research with a study about the efficiencies and savings afforded by installing its award-winning product in IT server cabinets

Santa Fe, NM (Vocus) June 24, 2009 -- Upsite Technologies, Inc., leading developer of highly engineered airflow solutions for the data center, has added to its [HotLok® Blanking Panel](#) research with a recent study about the efficiencies and savings afforded by installing the award-winning HotLok Blanking Panel in IT server cabinets. The HotLok Blanking Panel took home the [best new product Gold award](#) in TechTarget's SearchDataCenter.com's infrastructure category for 2008, for its 99.97 percent effective seal of IT server cabinets.

The original HotLok Blanking Panel research has been expanded to include two financial impact studies in a white paper titled [Seal IT Equipment Cabinets for Significant Annual Cost Savings and Simple Payback in a Few Short Months](#). The paper examines real-life scenarios of two data centers of differing challenges and sizes to demonstrate how installing HotLok Blanking Panels can help data center managers achieve up to 29 percent reduction in annual operating costs and simple payback in a few short months. The paper is available to the public in the Learn More/White Paper section of [upsite.com](#).

The [first release of this study](#) included a two-dimensional Computational Fluid Dynamics (CFD) analysis, which compared the effect of different types of blanking panels on airflow patterns and IT equipment intake-air temperatures within server cabinets. HotLok Blanking Panels proved the highest effective seal to prevent the circulation of hot exhaust air to the IT equipment intakes. Competitor products, which leave gaps between panels and equipment, allow 19 percent hot exhaust air circulation, which can reduce the reliability of equipment and unnecessarily reduce the efficiency and capacity of cooling units, ultimately resulting in higher operating costs.

About Upsite Technologies

Upsite Technologies, Inc. develops award-winning, highly engineered airflow solutions for the data center to cool IT equipment more efficiently, increase reliability, save energy, and lower operating costs. Upsite is an ENERGY STAR Service and Product Provider Partner.

As the leading innovator of engineered sealing solutions, Upsite continues to develop products and services to enhance the extensive lines of KoldLok® and HotLok® products and Upsite® Services, data center optimization solutions.

Our solutions optimize thermal load capacity, increase equipment reliability, target hotspot remediation, reduce intermittent equipment failures, minimize bypass airflow, and diminish the capital and operating costs associated with installing additional cooling equipment.

Upsite's highly engineered solutions are employed by data centers worldwide to help reduce energy usage and

costs, while increasing reliability. Upsite's products and services currently optimize more than 28 million ft² (2.6 million m²) of data center space. Visit upsite.com for more information.

Regal Electronics Tackles EMI/RFI Suppression and Noise Problems with Expanded Line of Shielded HDMI, Mini-Din and RJ-45 Connectors with EMI/RFI Gasket

Regal Electronics has expanded its line of specialty EMI/RFI suppression connectors with the addition of a HDMI connector. The new HDMI connector is shielded and features an EMI/RFI suppression gasket based on Regal's patented RJ-45 connector. With the new connector, Regal now offers a complete line of single and multi-port RJ-45, mini-din, and HDMI connectors that employ Regal's unique combination of shielding and EMI/RFI suppression technology.

Sunnyvale, CA (PRWEB) June 24, 2009 -- Regal Electronics has expanded its line of specialty EMI/RFI suppression connectors with the addition of a HDMI connector. The new HDMI connector is shielded and features an EMI/RFI suppression gasket based on Regal's patented RJ-45 connector. With the new connector, Regal now offers a complete line of single and multi-port RJ-45, mini-din, and HDMI connectors that employ Regal's unique combination of shielding and EMI/RFI suppression technology.

According to Regal Executive Vice President, Dr. William Kunz, "Given today's high speed clock and data rates, a manufacturer might not be meeting EMI/RFI compliance requirements on an enclosure because it is 'leaking' RF through openings needed by various types and sizes of connectors. A typical approach to solving the problem might range from completely redesigning the circuit at the board level -- a very expensive and lengthy proposition -- to suppressing the 'leaks' at the enclosure interface by using specially designed Regal EMI/RFI suppression connectors. Swapping in Regal's suppression connectors is much faster and a lot less costly than a complete redesign, especially late in the manufacturing cycle."

All of Regal's specialty EMI/RFI suppression HDMI, mini-din and RJ-45 connectors are available RoHS compliant.

About Regal Electronics, Inc.

Since 1976, Regal has manufactured quality electronic components, speakers, connectors, and a wide variety of related products and services from its operations in the United States, China and Taiwan. Engineering support for Regal Electronics, Inc. line of products is located at its Sunnyvale, California, headquarters. More information may be found on Regal's Web site: www.regalusa.com.

Retail Technology Experts (RTE) Counted Among Top Finalists for the 2009 Microsoft Worldwide Partner Conference Awards in Microsoft Dynamics Point of Sale

Today, RETAIL TECHNOLOGY EXPERTS (RTE) announced it has been selected as a 2009 Microsoft Worldwide Partner Conference Awards finalist in Microsoft Dynamics Point of Sale.

Miami Lakes, Florida (PRWEB) June 24, 2009 -- Today, [RETAIL TECHNOLOGY EXPERTS \(RTE\)](#) announced it has been selected as a 2009 Microsoft Worldwide Partner Conference Awards finalist in Microsoft Dynamics Point of Sale.

"We are honored to be selected as a finalist for the 2009 Microsoft Worldwide Partner Conference Awards in Microsoft Dynamics Point of Sale," stated Mahendran Ramanathan, President of Retail Technology Experts. "As a Microsoft Gold Certified Partner, we are proud to recommend [Microsoft Dynamics Retail Management System \(RMS\)](#) to our customers as a complete, adaptable solution that can meet their unique retail needs. Having Dynamics RMS as part of our product portfolio was instrumental in successfully addressing the tough economic environment we faced in the past year. We look forward to continued success working with Microsoft and to providing the best retail technology solutions to our customers."

Awards will be presented in a number of categories, with winners chosen from a pool of nearly 2,000 entrants worldwide. The Microsoft Dynamics Point of Sale Partner of the Year award recognizes partners who have exhibited excellence in providing innovative and unique solutions based on Microsoft Dynamics Point of Sale. Successful entrants for this award will demonstrate consistent, high-quality, predictable service to Microsoft Dynamics customers that helps to ensure significant business benefits for customers from their Microsoft Dynamics Point of Sale investments. Successful entrants will also demonstrate business leadership and success with strong growth in new customer additions and revenue. To be eligible for this award, you must:

- Be active in the Microsoft Dynamics Point of Sale specialization.
- First profile your nominated solutions in Partner Solution Profiler.

"Partners are the key to igniting business innovation through great technology as well as helping customers drive down costs," said Allison L. Watson, Corporate Vice President, Worldwide Partner Group, Microsoft Corp. "Congratulations to the 2009 WPC Award finalists who have demonstrated a superior level of expertise as well as a focus on delivering customer value. We look forward to seeing these partners fulfill their limitless potential as they continue to provide customers with world-class Microsoft solutions."

The Microsoft Worldwide Partner Conference Awards recognize Microsoft partners that have developed and delivered exceptional Microsoft-based solutions over the past year.

Retail Technology Experts (RTE), a Microsoft Gold Certified Partner, is an innovative retail technology solution provider that has been providing turn-key technology solutions to retailers for the past 17 years. RTE's experience in retail and specifically in retail technology affords the retailer an expertise second-to-none in their industry. From initial discovery to implementation and on-going support, RTE offers retailers a true strategic partnership.

Pranah Set to Redefine Data Storage for Small and Midsized Businesses

Combining Highly Efficient Hardware and Software to Produce Most Complete Network Storage System Available in 1U Footprint

St. Paul, MN (PRWEB) June 23, 2009 -- Pranah Storage Technologies today announced it has created the easiest-to-use and most complete network storage system for the under-\$50K price class. (This class is the fastest-growing part of the storage business, according to IDC's latest report on storage industry revenues, issued June 5.) Pranah's system features purpose-built hardware, designed specifically for data storage, combined with storage software applications that are typically seen only in high-end systems. Designed for simplicity and scalability, the company says its Pranah 2000 Series provides more value than any storage system available to small and midsized businesses (SMBs).

"We're doing nothing less than redefining reliability, flexibility, and value in storage networking for this underserved market," said Steve Carter, Pranah's CEO. The company's intelligent network storage products incorporate both standards-based and patented proprietary technology. By developing and controlling its own hardware and software, Pranah improves ease-of-use for sophisticated storage applications. "In a difficult economic environment, our solution allows customers to cut their costs both for the amount of hardware required and the staffing associated with overly-complex systems," he said.

Performance and Scalability

Pranah's 2000 Series storage controllers can be aggregated, thereby delivering increased storage performance previously unavailable on systems in this price class. The company's support of 10Gb/s iSCSI allows it to stand out from the competition and delivers unique advantages in supporting applications requiring massive storage demands, such as video surveillance/security, medical imaging, document retention, video production, and cloud computing.

Power, Cooling, and Density Improvements

The new product line features "green-friendly" design that utilizes a U.S.-patented side-vented rail system to improve cooling by 31%, and allow a storage density improvement of up to 50%. Pranah 2000 Series systems do not require dedicated data racks, and therefore can share the same rack with IP switch and routing equipment, telco equipment, and racked servers.

Product Details

The elegant design of the Pranah 2000 Series system is based on simplicity, delivering more value in a 1U form factor than any other product on the market today, including more disks per U, and featuring plug-and-play expansion with SAS, SATA, or Fibre Channel drives.

- Each system comes with standard software (called the Pranah Control Suite™), which includes Thin Provisioning, Snapshot, and Integrated NAS, all managed from a simple browser interface.
- Tiered Storage, Replication, and Distributed File System (enabling disk optimization and geographic diversity of critical data) are options.
- It integrates both SAN and NAS within the same (1U) storage unit.
- It can include dual hot-swap storage controllers and multiple host connections in the same chassis.

- It features a patented cooling system.
- And it's scalable without extensive product support or costly reinvestment.

Value Proposition and Differentiation

Because Pranah has developed its own hardware and software intellectual property, it offers a unique value proposition to its customers. Elegant design and tight integration make the system simple to operate and easy to maintain. A key benefit of the company's systems is that NAS is integrated as a standard feature. By doing so, the customer does not have to do their own time-consuming, expensive integration, and maintain third-party software and hardware to support file-based data. Storage applications such as Thin Provisioning, Tiered Storage, Snapshot, Replication, and Distributed File System (DFS) were developed by Pranah to be easy to use yet fully functional, and they all come loaded on the system, easily activated with a software key when required.

Company Strengths

Pranah has a seasoned management team, with a proven history in the data storage, software, and military markets. Its development team has a combined 200 years of hardware and software experience in bringing storage and server products to market, and a strong intellectual property position. Pranah's products redefine storage networking by simplifying operation, increasing reliability, reducing complexity, and significantly lowering both cap ex and op ex costs.

Analyst Comment

"Small businesses, workgroups, remote, and branch offices now have another option when it comes to multi-protocol, small form factor storage with the new offerings from Pranah," said Greg Schulz, Senior Analyst at the StorageIO Group, and author of 'The Green and Virtual Data Center' (CRC). "Pranah is joining an industry-wide movement of delivering solutions specifically designed to the needs of small business - to provide value, flexibility, and feature-functionality, not to mention ease-of-use."

Product Availability

Pranah's 2000 Series product line will initially include three different control units, and three expansion units. Product is shipping in late July in limited availability to 15 key customers and resellers for testing and evaluation, with general availability in September.

Advantages for Smaller Businesses

"Now, businesses that balked at six-figure price tags for a shared storage system have a better answer," said Dave Walstad, Pranah's VP of sales and marketing. "Pranah's systems were designed with the small business customer in mind. To gain further leverage on a Pranah investment, Disaster Recovery can be easily deployed, since shared storage can be replicated off-site. What's more, SAN and NAS are delivered in the same box, so there's no need for two separate systems, with the attendant complexities of integration and maintenance. We're confident our storage systems are the lowest cost, smallest footprint, easiest-to-use in the under-\$50K price class. And they have the flexibility to meet the ever-changing needs of growing businesses."

About Pranah

Pranah Storage Technologies Inc, based in suburban Saint Paul, Minnesota, designs and manufactures data storage systems that bring simplicity and high efficiency to data-intensive environments in small to mid-sized businesses. Its products combine patented technology with sustainable design to create robust, adaptable data

storage platforms. The company's storage products are incredibly simple, uniquely efficient, and radically better. The name Pranah is a Sanskrit word meaning "all-pervading vital energy." An organization's data is its "Pranah," and the company's storage systems are designed to protect that vital resource. For more information, please visit [Pranah's web site](#) or call 888-99-PRANAH.

Reductive Labs Secures \$2.0 Million Funding Round Led by True Ventures

Reductive Labs' Puppet Helps Businesses Slash IT Expenses Through Improved Automation and Management of IT Operations

Portland, OR (PRWEB) June 23, 2009 -- [Reductive Labs](#), a provider of next-gen enterprise IT automation, announced today that it has closed its Series A round of funding in the amount of \$2 million led by Silicon Valley-based, early stage investor True Ventures and other private investors. Reductive Labs will use the capital infusion to expand the company and further enhance its flagship offering - Puppet. Reductive Labs is pioneering a fundamentally different paradigm to IT management. Puppet helps businesses optimize IT operations, transforming what is often viewed as a cost center into a strategic advantage.

Over the past few decades, the world's demand for computational resources has grown exponentially. However, the technology to manage these systems has not kept pace with this growth. Forrester estimates that there are currently over a billion PCs in use today, and projects that number will double by 2015. Scaling the system infrastructure, which enables researchers and businesses to solve problems and provide solutions, presents many challenges for traditional IT operations to keep up with the pace.

The global recession has only compounded this situation. Facing unprecedented cost pressures, businesses have required IT to reduce headcount yet still meet increased IT demands. Adding one more layer to "the Perfect Storm" forming in IT has been the growth in virtualization and cloud computing; both technologies offer a cost-effective way to expand storage, services and processing capacities without further cash outlays for new hardware infrastructure. However, virtualization and cloud computing can increase complexities and management expenses, as their adoption multiplies the number of machines and services running on virtual machines that still need to be configured. Gartner estimates worldwide cloud computing revenue will surpass \$56.3 billion in 2009 and will likely skyrocket to \$150 billion in 2013.

Reductive Labs is providing a breakthrough solution to help large scale, fast growing, transaction-driven businesses squarely address this real IT pain point. The world's most leading-edge companies have selected and use Reductive Lab's Puppet framework to help them automate and manage their IT departments, including Google, Digg, Twitter, New York Stock Exchange, Barclays Capital, Oracle, Sun, Red Hat, Harvard Law, and Stanford.

"We are impressed with the vision, commitment and passion that the Puppet founding team exhibits as well as the growing market opportunity at hand. Reductive Labs has brought to the market a truly disruptive solution, as evidenced by its adoption within the open source community and from some of the market's leading-edge companies," noted Phil Black, Co-founder, True Ventures.

Manage Entire IT Infrastructure as Code

Reductive Labs' Puppet is an open source software framework to automate infrastructure. Puppet has fundamentally changed how companies can configure, provision, manage and scale their IT infrastructure using

software tools rather than IT staff. In doing so, Puppet helps IT departments do more work and provide higher service levels with less staff. Knowledge is the driving philosophy behind the Puppet framework. Puppet's simple, declarative-based language enables engineers to programmatically encode semantics about 'why' systems are configured a particular way. Instead of just 'what' or procedures about 'how' services are configured, systems are built and managed with code, utilizing all the recognized best practice tools and processes for software development.

By managing IT infrastructure as code, Puppet creates an audit trail, showing what systems are running, the history of all the work done on the system, and the policies that Puppet is carrying out. This new level of transparency can effectively tear down the wall of confusion between development and operations teams, who now have improved insight into what is being done and why. As a result, IT departments are better able to support the company's requirements and implement change consistently, accurately and more rapidly.

Puppet's automation capabilities also alleviate management complexities and expenses introduced by cloud computing and virtualization. Puppet can manage and configure the virtual machine lifecycle at the operating system level more effectively than machine image-based management approaches. IT departments can also leverage Puppet to flexibly move services back and forth from the cloud to behind the company's firewall.

"We're thrilled to have True Ventures' endorsement, investment and involvement in our company. We felt their entrepreneurial spirit and philosophy best matched up with what we wanted in an ideal venture partner. The funding will enable us to enhance Puppet's capabilities while helping more companies transform their IT operations into a strategic competitive advantage," noted Luke Kanies, CEO of Reductive Labs.

About True Ventures:

Based in the Silicon Valley, with offices in Palo Alto, CA, San Francisco, CA, and Great Falls, VA, True Ventures invests in promising entrepreneurs at the earliest stages in the highest-growth segments of the technology market. The partners at True Ventures have started over ten companies as founders, and the venture firm is designed by entrepreneurs for entrepreneurs. The firm clearly understands both opportunities and challenges in the earliest stage of development and provides young companies with a powerful, seasoned partner. True Ventures has raised two venture capital funds to date and manages \$375 million in limited partner capital. For more information, please visit www.trueventures.com.

About Reductive Labs:

Based in Portland, OR, Reductive Labs provides next-gen IT automation, enabling IT organizations to manage infrastructure as code so they can provide higher service levels with less staff. Reductive Lab's flagship offering, Puppet, significantly improves the automation and management of IT operations for large scale, fast growing, transaction-driven businesses, which are facing unprecedented cost pressures, reduced headcount, and increased support demands. Puppet's knowledge-based approach creates an audit trail that delivers a new level of transparency so that IT teams can implement change more consistently, accurately and rapidly over the lifecycle of the systems. StrataScale Names Denoid Tucker Vice President of Technology

IronScale's Chief Architect to Focus on Strategic Expansion of Instant Physical Infrastructure Solutions

Sacramento, CA (PRWEB) June 23, 2009 -- StrataScale, Inc., a subsidiary of RagingWire Enterprise Solutions, Inc., and the only managed hosting company that provides an Instant Physical Infrastructure™ with cloud capabilities, today announced that it has named Denoid Tucker vice president of technology. Mr. Tucker was formerly senior director of engineering at RagingWire and was the chief architect of StrataScale's flagship service, IronScaleSM. IronScale is the first automated, fully managed server hosting service that enables customers to build, manage, and scale entire physical server environments in minutes from a secure Web portal. Building on more than 15 years experience in the IT industry, Mr. Tucker designed IronScale to save SMB and enterprise customers time, money, and improve operational efficiencies when developing and maintaining the bare metal servers that their businesses demand.

"Denoid is one of the most skilled and insightful engineers I know," said Yatish Mishra, founder and chief technology officer of StrataScale. "He was not only instrumental in developing RagingWire into a world-class colocation and managed service provider, he also executed on the StrataScale vision to create automated provisioning and management of physical servers with cloud-like functionality in only eighteen months. In his new role, Denoid will create new features and services for IronScale, while ensuring that StrataScale always exceeds the dynamic needs and expectations of its customers."

Mr. Tucker's career has followed the evolution of the RagingWire datacenter from hosting facility for Internet Service Providers (ISPs) and e-commerce customers to full-fledged IT infrastructure provider, with the addition of StrataScale as a subsidiary. His background in network systems architecture and deployment of large-scale IT environments has enabled Mr. Tucker to develop a unique understanding of how to scale IT infrastructure for SMBs and enterprise companies across industries with vastly different business models.

"When we started StrataScale, we took on the challenge of advancing the expectations for the IT hosting industry, aiming to make hosting service options as robust and efficient as possible," said Mr. Tucker. "We are just beginning to tap into the promise of IronScale's technology. I am thrilled to be able to drive the next phase of StrataScale solutions, and I am confident that we will convince people to think differently about IT, based on our uncompromising commitment to innovation."

Prior to joining RagingWire in 2000, Mr. Tucker worked for Photronics, Inc., the industry leader in the design, development, and production of reticles and photomasks for semiconductor and microelectronic applications. In various corporate management roles, he engineered enterprise-class IT systems and a global infrastructure that powered photo-masking processes for Motorola, AMD, and other semiconductor manufacturers.

A native of Los Angeles, Mr. Tucker studied computer science at California State University at Northridge, and in 1996 he joined CRL Networks in a senior systems administrator role. He subsequently served as a senior engineer for several leading ISPs prior to joining Photronics.

About StrataScale

StrataScale, Inc. creates next-generation, best-in-class hosting solutions that offer customers the efficiencies of cloud computing on physical infrastructure through its flagship service IronScale. IronScale is the only automated, fully managed server hosting service that enables customers to build and manage physical servers in minutes from a secure Web portal using patent-pending technologies. IronScale's unique interface gives customers direct, anytime, anywhere control over their hosted infrastructure and a single point of administration to make changes, manage applications, and add to their server environment on demand. StrataScale is a wholly owned subsidiary of RagingWire Enterprise Solutions, Inc., a world-class colocation and managed services provider. For more information, please visit www.stratascale.com.

Catch Announces Launch of New Online Directory for the Australian Surveillance and Security Sector

Catch, an online division of Reed Business Information Australia, today launched SecuritySpot (www.securityspot.com.au), a new free online directory for Australian suppliers of security and surveillance services and equipment. The site offers web links, contact details and product and service information for more than 1500 companies.

Sydney, NSW (PRWEB) June 23, 2009 -- Catch, an online division of Reed Business Information Australia, today launched SecuritySpot (www.securityspot.com.au), a new free online directory for Australian suppliers of security and surveillance services and equipment. The site offers web links, contact details and product and service information for more than 1,500 companies.

In response to a paucity of online resources for the security products, SecuritySpot was designed as an online destination for businesses and consumers searching for security and surveillance products and solutions. The site includes products and services such as alarm and tracking systems, CCTV and wireless video transmitters, biometric solutions, locksmiths, remote monitoring, and security doors and fencing.

For Australian companies operating in the surveillance and security sectors, SecuritySpot offers free listings. Once listed, businesses are encouraged to add an unlimited amount of free product and service information to the site, enhancing the online presence of their business and making it easier for potential customers to locate the information they require.

SecuritySpot is the latest online business directory from Catch, which operates more than 15 similar industry-specific directories in Australia, the US and the UK. For users, SecuritySpot will provide a consolidated online source of the latest product, service, and company information. While for Australian security and surveillance businesses, the site will provide promotion through a niche online channel and a source of new sales enquiries.

About Catch:

Catch, an online division of Reed Business Information Australia (RBI), manages a growing portfolio of business-to-business and business-to consumer websites, including global business directory Hotfrog.

Tolly Common RFP Releases Version 1.5 of their LAN Switch Power Consumption Best Practices Guide

With the updated release based on extensive feedback by leading technology vendors and test tool providers, the best practices guide now includes evaluation and methodology guidelines for testing layer 3 and layer 4-7 switches

Boca Raton, FL (PRWEB) June 22, 2009 -- Enterprises of all sizes are becoming increasingly conscious of the energy consumption of their business tools, including always on devices like Layer 2-7 LAN switches. Today Tolly Common RFP releases LAN Switch Power Consumption #1080 Version 1.5 that now includes guidelines for testing layer 3 and layer 4-7 switches and will serve as the methodology for the upcoming Layer 2-7 LAN and SAN Switch Green TestFest taking place the week of August 3rd.

"In the current economic environment, all areas of businesses are looking to reduce operating costs and eliminate unnecessary expenses," said Kevin Tolly, founder, president, and CEO of The Tolly Group. "With the Tolly Common RFP for LAN Switch Power Consumption, readers can become instant experts by utilizing proven methodologies and understanding in-depth elements necessary to jumpstart their internal green initiatives".

The Tolly Common RFP for LAN Switch Power Consumption is built from leading edge testing performed by Tolly over the past two years on switches from Cisco, Extreme Networks, Foundry (Brocade), Nortel, BLADE Network Technologies, ZyXEL Communications, NETGEAR, Linksys by Cisco and HP ProCurve.

In addition, Version 1.5 of the LAN Switch Power Consumption RFP includes integrated best practices recommendations from leading vendors such as, Spirent Communications, Ixia, 3Com, Alcatel-Lucent and HP ProCurve.

The RFP best practices test guidelines are the basis for Tolly tests and are also being licensed to end users and networking vendor organizations worldwide to guide their own internal testing.

About Tolly Common RFP, LLC

Common RFP, LLC is a Tolly Group business. The Tolly Group, whose 20 years of hands-on IT evaluations, along with input from vendors and users of information technology, have provided the basis for our series of best practices guides. The Tolly Common RFP series are best practices guides for conducting IT product evaluations. The series presents a collection of detailed test plans designed to help validate feature/function and performance characteristics of Information Technology products and solutions.

For more information on Common RFP, visit its Web site at: CommonRFP.com, call +1 561.391.5610, fax +1 561.391.5810.

22Moo Intros iPhone 3.0 Game Controller, Video Eyewear and a Premium Mono / Stereo Convertible Bluetooth Headset

Many iPhone gamers had requested for additional controls such as a D-Pad or external joystick and 22Moo has responded by developing the GameBone Pro. 22Moo also has announced the immediate availability of the Argo MPA and Argo DVD/TV LTD "Made for iPod" iPhone 3.0 compatible video eyewear and \$100 mono / stereo convertible Bluetooth headset.

Sydney, NSW Australia (PRWEB) June 22, 2009 -- Ever since the release of the iPhone many gamers had requested for additional controls such as a D-Pad or external joystick. 22Moo had responded by developing the GameBone Pro. Along with the GameBone Pro, 22Moo has announced the immediate availability of the Argo MPA and Argo DVD/TV LTD "Made for iPod" iPhone 3.0 compatible video eyewear and \$100 mono / stereo convertible Bluetooth headset.

GameBone Pro

The GameBone Pro is one of the world's first iPhone OS 3.0 compatible game controller to feature an 8-way D-pad with 6 buttons, incorporate a 2000mAh battery and support both Bluetooth and Apple's 30-pin dock connector connectivity. "Any devices running iPhone 3.0 OS will be 100% compatible with the GameBone Pro" states Product & Solutions manager Jason Chan.

Features and Specifications

- Connect with Bluetooth wirelessly OR use the 30-pin dock connector cable
- 2000mAh Lithium-ion Battery for additional power for your iPod touch / iPhone*
- LED showing charging state and capacity
- 8-way D-Pad with 6 buttons
- Built-in speakers, mic and 3.5 audio headphone jack

Currently 22Moo has not set a price for the GameBone Pro but instead in an unusual move, have offered all potential GameBone Pro owners to recommend a price that would represent good value for money and instantly entice them to purchasing of the GameBone Pro upon its release in mid September 2009.

Developers who wish to add GameBone Pro support in their iPhone SDK applications are able to register their interest by visiting 22Moo's website.

Argo Video Eyewear products

Carefully designed, improved and tested over 5 years, the latest Argo MPA and Argo DVD/TV LTD "Made for iPod" and "iPhone 3.0 compatible" video eyewear products is now optimised for maximum comfort, durability, versatility and ease of use - thanks to the valuable feedback from the thousands of customers around the world.

The Argo range is one of the very few video eyewear products that will allow users to simultaneously wear both prescription glasses and the video eyewear. With regards to compatibility, both the Argo MPA and DVD/TV LTD

supports a direct connection to all iPhone generations and iPods with video out as well as composite TV/AV-out supported devices such as game consoles, dvd players, DV cameras and much more.

Argo MPA features and specifications

- Prescription eyewear compatible
- Removable rubber eye-shield for creating immersive experience
- Removable premium in-ear style stereo earbuds
- Fully adjustable nose piece
- Supports AV composite input
- Built-in rechargeable lithium battery
- Licensed "Made for iPod" iPod and iPhone compatible cable
- Award-winning Kopin LCD microdisplay technology
- Field Of View : 24°
- Display Format : QVGA, 320 x 240 pixels
- Virtual Screen Size : TRUE 37" screen at 7 ft away
- Input Signal : Composite (NTSC or PAL)
- Weight : 94.1g
- SRP \$US195

Argo DVD/TV LTD features and specifications

- Prescription eyewear compatible
- Removable rubber eye-shield for creating immersive experience
- Removable premium in-ear style stereo earbuds
- Fully adjustable nose piece
- Supports AV composite input
- External head/earphone or speaker support
- Control box with removable rechargeable lithium battery and Licensed "Made for iPod" dock connector
- Award-winning Kopin LCD microdisplay technology
- Field Of View : 32°
- Display Format : VGA, 640 x 480 pixels
- Virtual Screen Size : TRUE 48" screen at 7 ft away
- Input Signal : Composite (NTSC or PAL)
- Weight : 73.2g
- SRP \$US295

The Argo video eyewear products are currently available exclusively online via 22Moo's website and some select Australian stores.

22Moo's currently seeking distributors and resellers for the Argo video eyewear range in the US, UK, Canada and many other countries.

S100 Premium Mono / Stereo convertible Bluetooth headset

The S100 is one of the world's first Bluetooth headsets to allow the user to configure their headset from mono to

stereo by simply connecting the included sub receiver. The S100 also features multi-point pairing and Auto call lock which eliminates any chance of the S100 making unintended calls while stored in users pockets or bags - which is a very common issue amongst other Bluetooth headsets.

Another feature is the Ultra Power Save Mode which allows up to 60 days of standby, eliminating the need of frequent charging. The S100's call quality has been optimized by the use of a built-in DSP chip. The DSP chip also assists with elimination of noise and echo. The S100 is available online from 22Moo at a suggested retail price of \$US59.

For full features and specifications on the S100, media review units requests, purchase of products, distribution or reseller interest and/or further information, please visit <http://www.22moo.com.au>

About 22Moo International Pty Ltd

22Moo is a funky, fun and innovative world-recognised distributor of portable video eyewear, high quality bluetooth accessories and the developer of the world's first and only iPod and iPhone compatible internet kiosk solution and the GameBone Pro iPhone 3.0 compatible game controller. 22Moo was also one of the very earliest Apple approved iPhone SDK developers in the world. Situated in Sydney 22Moo are the sole Australasian distributor of the award-winning Sleeptracker® watches from Innovative Sleep Solutions LLC as well as the multi-award winning DR. Mist body hygiene floatation fluid spray from Deltapreneur Sdn Bhd.

'Apple', 'iTunes', 'iPod', and 'iPhone' are trademarks of Apple Computer, Inc., registered in the U.S. and other countries.
